**Afforestation and Reforestation: Drivers, Dynamics, and Impacts** Jingfeng Xiao, Ge Sun, Lu Hao, Gang Dong, Zhiqiang Zhang, 2019-10-16 Afforestation reforestation or forestation has been implemented worldwide as an effective measure towards sustainable ecosystem services and addresses global environmental problems such as climate change The conversion of grasslands croplands shrublands or bare lands to forests can dramatically alter forest water energy and carbon cycles and thus ecosystem services e.g carbon sequestration soil erosion control and water quality improvement Large scale afforestation reforestation is typically driven by policies and in turn can also have substantial socioeconomic impacts To enable success forestation endeavors require novel approaches that involve a series of complex processes and interdisciplinary sciences For example exotic or fast growing tree species are often used to improve soil conditions of degraded lands or maximize productivity and it often takes a long time to understand and quantify the consequences of such practices at watershed or regional scales Maintaining the sustainability of man made forests is

becoming increasingly challenging under a changing environment and disturbance regime changes such as wildland fires urbanization drought air pollution climate change and socioeconomic change Therefore this Special Issue focuses on case studies of the drivers dynamics and impacts of afforestation reforestation at regional national or global scales These new studies provide an update on the scientific advances related to forestation This information is urgently needed by land managers and policy makers to better manage forest resources in today s rapidly changing environments
