- 1. Create a table of at least four values for the function that includes two points of intersection between the airplane and rainbow.**

X	Y
0	44
2	32
4	20
6	8

- 2. Answer the following questions in complete sentences.**

- What is the domain and range of the rainbow? Explain what the domain and range represent. Do all of the values make sense in this situation? Why or why not?**

The domain of the rainbow is $(-6, 6)$. It represents the set of values that we can plug in. The range of the rainbow is $(0, 36)$. This represents the set of values that the function assumes. Yes, the values do make sense since -6 and 6 have a max of 36 which is the highest output here.

- What are the x and y intercepts of the rainbow and explain what they represent.**

The x intercept is at $(-6, 6)$. This represents the two points where the rainbow ends. The y intercept is at $(0, 36)$. This represents how high the rainbow would go.

- Is the linear function you created with your table positive or negative? Explain.**

using Algebra Daily Skill Builders This 96 page book features two short reproducible activities per page and includes enough
lessons for an entire school year It covers topics such as number patterns word problems equations tables graphs linear
relationships variables contextualized problems properties order of operations and exponents Activities become more
challenging as students build upon what they have learned The book is perfect for review and practice and supports NCTM
and Common Core State Standards Introduction to Algebra: Grade 6 Workbook Maria Miller,2016-10-19 In Introduction
to Algebra Grade 6 Workbook we concentrate on two important concepts expressions and equations We also touch on
inequalities and graphing on a very introductory level In order to make the learning of these concepts easier the expressions
and equations in this workbook do not involve negative numbers as they typically do when studied in pre algebra and algebra
We start out by learning some basic vocabulary used to describe mathematical expressions verbally terms such as the sum
the difference the product the quotient and the quantity Next we study the order of operations once again A lot of this lesson
is review The lesson Multiplying and Dividing in Parts is also partially review and leads up to the lesson on distributive
property that follows later Then we get into studying expressions in definite terms students encounter the exact definition of
an expression a variable and a formula and practice writing expressions in many different ways The concepts of equivalent
expressions and simplifying expressions are important If you can simplify an expression in some way the new expression you
get is equivalent to the first We study these ideas first using lengths it is a concrete example and hopefully easy to grasp In
the lesson More On Writing and Simplifying Expressions students encounter more terminology term coefficient and constant
In exercise 3 they write an expression for the perimeter of some shapes in two ways This exercise is once again preparing
them to understand the distributive property Next students write and simplify expressions for the area of rectangles and
rectangular shapes Then we study the distributive property concentrating on the symbolic aspect and tying it in with area
models The next topic is equations Students learn some basics such as the solutions of an equation are the values of the
variables that make the equation true They use properties of operations and the idea of maintaining the equality of both sides
of an equation to solve simple one step equations I have also included a few two step equations as an optional topic Lastly in
this workbook students get to solve and graph simple inequalities and study the usage of two variables and graphing
