Emergent Timber Technologies Simone Jeska, Khaled Saleh Pascha, 2014-10-27 The old material of wood has been used to construct dwellings of different types since the dawn of mankind And not without reason Its low density combined with high rigidity good processability and its resistance makes it an excellent building material There is currently a pioneering renaissance of the timber construction for two distinct reasons first wood is increasingly being rediscovered as one of the most important renewable raw materials for sustainable construction Moreover a revolution in the construction of timber structures began several years ago with the ever progressive use of three dimensional CAD models for digitally controlled robot manufacturing The book documents these developments in particular the engineering bonding techniques the introduction of digital production techniques and the innovative material developments of this material The chapter on composite structures and experimental structures specifically address trends toward the future oriented dimensions of timber construction In the final section outstanding designs are documented in detail such as the Club House of Haesley Nine Bridges Golf Course designed by Shigeru Ban in Yeosu South Korea and the double gymnasium in Borex Crassier Switzerland by Graeme Mann and Patricia Capua Mann *Advances in Carbon Management Technologies* Subhas Sikdar, Frank Princiotto, 2020-03-19 *Advances in Carbon Management Technologies* comprises 43 chapters contributed by experts from all over the world Volume 1 of the book containing 23 chapters discusses the status of technologies capable of yielding substantial reduction of carbon dioxide emissions from major combustion sources Such technologies include renewable energy sources that can replace fossil fuels and technologies to capture CO₂ after fossil fuel combustion or directly from the atmosphere with subsequent permanent long term storage The introductory chapter emphasizes the gravity of the issues related to greenhouse gas emission global temperature correlation the state of the art of key technologies and the necessary emission reductions needed to meet international warming targets Section 1 deals with global challenges associated with key fossil fuel mitigation technologies including removing CO₂ from the atmosphere and emission measurements Section 2 presents technological choices for coal petroleum and natural gas for the purpose of reducing carbon footprints associated with the utilization of such fuels Section 3 deals with promising contributions of alternatives to fossil fuels such as hydropower nuclear solar photovoltaics and wind Chapter 19 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license *Rethinking Wood* Markus Hudert, Sven Pfeiffer, 2019-04-18 *Advances in the materials and the digitalization of architecture* bring about new methods in design and construction Whereas traditional timber construction consists of pre cut and pre assembled timber sections modern timber buildings today consist of elaborate wood based materials Owing to their flexibility and good properties in terms of building physics and ecology these wood based materials are ideal for computer aided building component production Fifteen case examples from research teaching

A Viable Urban Perspective?* Marie Frier Hvejsel, Paulo J.S. Cruz, 2022-07-08 Structures and Architecture A Viable Urban Perspective contains extended abstracts of the research papers and prototype submissions presented at the Fifth International Conference on Structures and Architecture ICSA2022 Aalborg Denmark 6-8 July 2022 The book 578 pages also includes a USB with the full texts of the papers 1448 pages The contributions on creative and scientific aspects in the conception and construction of structures as architecture and on the role of advanced digital industrial and craft based technologies in this matter represent a critical blend of scientific technical and practical novelties in both fields Hence as part of the proceedings series Structures and Architecture the volume adds to a continuous exploration and development of the synergetic potentials of the fields of Structures and Architecture With each volume further challenging the conditions problems and potentials related to the art practice and theory of teaching researching designing and building structures as vehicles towards a viable architecture of the urban environment The volumes of the series appear once every three years in tandem with the conferences organized by the International Association of Structures and Architecture and are intended for a global readership of researchers practitioners and students including architects structural and construction engineers builders and building consultants constructors material suppliers planners urban designers anthropologists economists sociologists artists product manufacturers and other professionals involved in the design and realization of architectural structural and infrastructural projects **Enclose | Build** Eva Maria Herrmann, Martin Krammer, Jörg Sturm, Susanne Wartzeck, 2015-07-01 The building shell is the interface with the outside world it offers protection and at the same time represents its owners or occupants But what are the criteria for choosing a specific shell Why is a particular material used on a particular undercoat The fifth volume of the SCALE series Enclose Build is not about the curtain the dressing of the facade that surrounds a building but rather on a causal level about the exterior termination of a building the wall the facade which can be made of various materials surfaces and achieves different design effects It shows the conditions under which certain constructions can be employed and why what criteria such as construction costs issues of sustainability of energy efficiency of assembly or of insulation or protection against moisture can also influence the choice of a system In addition to classical constructions Enclose Build offers a look at future developments How will the facade evolve as an interface for information What do viable concepts for environmentally active energy efficient building shells look like Enclose Build is an indispensable tool for every architect and planner **Conceptual Joining** Lukas Allner, Christoph Kaltenbrunner, Daniela Kröhnert, Philipp Reinsberg, Institute of Architecture at the University of Applied Arts Vienna, Institute of Art Sciences and Art Education at the University of Applied Arts Vienna, 2021-11-22 This book explores experimental approaches to the design and construction of wooden structures in architecture while presenting

the results of an artistic research project Through the use of digital tools the anatomy of wood becomes a design determining principle for spatial structures The architects and artists also explore the potential of traditional craftsmanship and derive from this a material oriented practice Structures are not designed here for a specific use but rather open up various usage possibilities due to their unique spatial and geometric properties The documentation provides insight into an open ended research process Guest contributions reflect on the underlying concepts and thus the future relevance of wood as a building material

Springer Handbook of Wood Science and Technology Peter Niemz, Alfred Teischinger, Dick Sandberg, 2023-04-01 This handbook provides an overview on wood science and technology of unparalleled comprehensiveness and international validity It describes the fundamental wood biology chemistry and physics as well as structure property relations of wood and wood based materials The different aspects and steps of wood processing are presented in detail from both a fundamental technological perspective and their realisation in industrial contexts The discussed industrial processes extend beyond sawmilling and the manufacturing of adhesively bonded wood products to the processing of the various wood based materials including pulp and paper natural fibre materials and aspects of bio refinery Core concepts of wood applications quality and life cycle assessment of this important natural resource are presented The book concludes with a useful compilation of fundamental material parameters and data as well as a glossary of terms in accordance with the most important industry standards Written and edited by a truly international team of experts from academia research institutes and industry thoroughly reviewed by external colleagues this handbook is well attuned to educational demands as well as providing a summary of state of the art research trends and industrial requirements It is an invaluable resource for all professionals in research and development and engineers in practise in the field of wood science and technology

Wood and Wood Joints Klaus Zwerger, 2023-05-22 There is a long tradition of using wood as a distinct and ecologically sound building material Wooden architecture conveys for today s world the breadth of knowledge held in Western and Eastern cultures about the creative use of this unique material The typical technique of building with wood joinery requires that elements are connected only by the skillful interlocking of the constructive parts In this book the history of wooden architecture is described in detail using hundreds of examples from Japan China and Europe From a holistic understanding a picture emerges that is informative for architects and designers reopens an almost lost world to builders and will enthrall laypeople Also available in a German edition ISBN 978 3 0356 2479 3

Ecolabels, Innovation, and Green Market Transformation Daniel C. Matisoff, Douglas S. Noonan, 2022-11-03 This book develops a path to decarbonization through a process of Green Market Transformation Matisoff and Noonan assess the scope and impact of the green building movement which is working towards decarbonizing a sector that accounts for more than a third of global carbon emissions They describe the role of the movement in addressing sustainability challenges within the building and construction sector and suggest new ways of marshalling markets through the voluntary efforts of industry to shift society

towards a better future Matisoff and Noonan tell the success story of green industry seen through the lens of green buildings and ecolabels By combining case studies with recent interdisciplinary scholarship the authors provide a compelling narrative of the opportunities and limitations of reliance on voluntary approaches to regulation *Research Note PNW ,2007*

General Technical Report PNW-GTR ,1987 **The Cutting Edge** Robert A. Fimbel,Alejandro Grajal,John Robinson,2001-12-19 Recent decades have seen unprecedented growth in the scale and intensity of industrial forestry Directly and indirectly it has degraded the wildlife and ecological integrity of these tropical forests prompting a need to evaluate the impact of current forest management practices and reconsider how best to preserve the integrity of the biosphere Synthesizing the body of knowledge of leading scientists and professionals in tropical forest ecology and management this book s thirty chapters examine in detail the interplay between timber harvesting and wildlife from hunted and protected habitats to invertebrates and large mammal species Collectively the contributors suggest that better management is pivotal to the maintenance of the tropics valuable biodiversity arguing that we must realize that tropical forests harbor the majority perhaps 70 to 80 percent of the world s animal species Further they suggest modifications to existing practices that can ensure a better future for our valuable resources

Material Synthesis Achim Menges, 2015-09-24 Material Synthesis Fusing the Physical and the Computational Guest edited by Achim Menges A new understanding of the material in architecture is fast emerging Designers are no longer conceiving of the digital realm as separate from the physical world Instead computation is being regarded as the key interface for material exploration and vice versa This represents a significant perceptual shift in which the materiality of architecture is no longer seen to be a fixed property and passive receptor of form but is transformed into an active generator of design and an adaptive agent of architectural performance In stark contrast to previous linear and mechanistic modes of fabrication and construction materialisation is now beginning to coexist with design as explorative robotic processes This represents a radical departure from both the trite modernist emphasis on truth to materials and the dismissal of materials by the previous generation of digital architects The issue features designers researchers and thinkers that are at the forefront of exploring new modes of material enquiry and its deep interrelationship with technology biology and culture Through their work which unfolds from multifaceted alliances between the fields of design engineering and natural sciences it seeks to trace the emergence of a novel material culture in architecture Architectural and engineering contributors include Sean Ahlquist Martin Bechthold Philippe Block Karola Dierichs Jan Knippers Achim Menges Neri Oxman Steffen Reichert and Tobias Schwinn Scientific and philosophical perspectives provided by Mario Carpo Manuel De Landa Neil Gershenfeld and Thomas Speck Features the design research of Harvard's Material Processes and Systems Group MIT's Mediated Matter Group and Stuttgart University's Institute for Computational Design
