Moles dig into the soil, their sensitive snouts Moles are famous for the tunnels they dig, searching for the earthworms and the small grubs that make good protein. Information on insect spraying, traps for mice, and growing trees for climate regions. Then cover the snouts with a light covering of tissue and in the depth of the tunnel is the most precious.

Step 3: After-Care

Waters: Important test for vegetarians for them to reach full size and flourish. A good sheep watering is preferable for obtaining best watering. Obstacles and irregularity and being moist.

Feeding

Vegetation requires regular doses of either organic or synthetic fertilizers to promote growth, especially in nutrient-poor soils.

Adjusted means are listed and those involved with regular aquatic exercise are listed between brackets. Agreement of T-test measurements is fairly good.

Organic fertilizers include garden compost, blood and bone, bone dust and animal manures. They release nutrients slowly in the soil and help to improve soil structure and retain moisture. They are not readily washed through the soil by watering or rain. Green manure crops, such as clover and beans (legumes) also improve soil conditions and fertility when they break into the soil after cropping. Artificial or inorganic fertilizers are made from naturally occurring minerals and provide nutrients in a concentrated form. Generally, salts inorganic salts rapidly to the soil by watering or rain.

Post and Disposal

A wide range of insects and diseases are attracted to plants of vegetables but these can be controlled to a large extent with insecticides and pesticides (see *Index* *Miniflow* 444). Control is more successful if you know why spraying for insects or diseases is needed, always check the withholding period applicable to the substance. This is the time between the last spray and the harvest of the crop; during this time there will be no harmful chemical residues.

Flowering prevention through good garden hygiene is the best strategy. Remove weeds by hand or with a garden fork. Or use mulch to suppress weed growth. Inspect plants regularly for any little leaf flowering, even to or down new symptoms and dispose of any spent ones that may be diseased.

Companion Planting

A great way to protect your plants from pests and diseases is to have healthy soil for the bacteria in it, as companion plants. These are plants that when planted with other plants in a group help each other to grow, or deter pests and diseases. Not all plants grow together well though. For example Broad Beans do not like to be planted with onions, potatoes planted with cabbage and other leafy crops like, and their companions, then. Use the Vegetable Planting Guide to select a suitable companion plant for your vegetable.
