Marine Propulsion Diesel Engines:

This outstanding six cylinder 10.45 litre engine offers the greatest degree of efficiency, durability and refinement.

The specific fuel consumption rate of the engine when directly coupled to the dynamometer is the remarkably low value of 0.170 Buper h.p./p.hour which represents an overall thermal efficiency of no less than 39.75%. If the engine is operated slightly below maximum torque, it does attain over 40% thermal efficiency.

The engine is designed for use with a fresh water closed circuit heat exchanger or cool cooler system. Coolant is circulated at high rate by a centrifugal pump and temperature is automatically controlled at all loads and speeds from idle to maximum output.

The 6LXB features a wide use of aluminium, together with a one-piece cast iron dry lined cylinder block, with detachable cast iron cylinder heads ranged in two units of three.

Crankcase: The aluminium crankcase is pre-loaded vertically by 14 cylinder holding down studs reaching to steel main bearing bridges and transversely by 12 paired bolts embracing the width of the unit at each main bearing location. The combination of this construction achieves great rigidity and facilitates quiet and trouble operation of the engine. The high relative expansion and heat conductivity of aluminium permits of small initial bearing clearance and the rapid dissipation of heat.

Crankshaft: The crankshaft, which is machined all over from a die stamping of chromium-molybdenum steel, has hollow bored crankpins and main journals, securing reduction of stress concentration and reduced main bearing loading. It carries a torsional vibration damper at its forward end and runs in seven pre-finished copper/lead overlay plated steel bearings and one roller bearing. Bearing areas are generous in the extreme, ensuring long service life.

Cylinder Heads: The cylinder heads carry vertical inlet and exhaust valves with dual springs, valve levers and centrally located fuel sprayers. Valves and valve seat inserts are Stellite faced and the valve levers embody controlled lubrication arrangements for valve ends, stems and push rods. A decompressing device lifts the inlet valves to facilitate hand turning of the engine for routine adjustments. Coolant transfer from cylinder block to heads is by synthetic rubber joint rings independent of the main gas joint which is of solid steel construction.

Fuel Injection: The Gardner camshaft/governor assembly is transverse mounted in permanent alignment on the engine crankcase and carries two matching tandem-mounted three-element C.A.V. B.P.P. fuel injection pumps. The fuel injection pump camshaft, which carries the centrifugal governor at its aft end, is driven by helical gears from the forward end of the valve camshaft. The drive arrangement incorporates the Gardner injection advance and retard mechanism and hand operated levers for each injection plunger are provided for priming and testing purposes.
