Fossils will provide lots of information about the organism that used to inhabit the earth in the past. So when the organism dies, the weather usually destroys the body. But on other occasions the body will be covered by mud that will harden over time or it will be incased by ice, which will protect the body of the organism. When scientists come to dig up the fossils of the organism the scientist will compare the organism from the past to the futures organisms and they will identify the Evolutionary changes.
