the methodologies used for detecting protein coding mRNAs cannot be directly applied to miRNAs because of their small size. Over the past years researchers have made great efforts to developing techniques suitable for miRNA detection and quantification. A wide spectrum of creative and innovative techniques more than 30 different methods have been invented and validated. It has come to the time now to summarize these methods and present them in an orderly manner for better understanding and utilization of these methods to miRNA research and applications. In particular the development of methods for quantifying circulating miRNAs opens up a fascinating opportunity for realizing miRNA as diagnostic and prognostic biomarkers of human disease. A book on this subject may help boosting up the passion of researchers to further improve the existing techniques and develop more new methods to meet new application needs. These considerations prompted us and urged us to undertake the work writing a book focusing on miRNA expression detection methods.
