| INTRODUCTION:- RATIOS AND PERCENTAGES        | To understand that ratio is a comparison of two quantities which are in same units.<br>Percentage means the quantity out of 100.       | Recall the concept of ratios and percentages from the lower classes through different examples. If the no. of boys = 25 and no. of girls = 20 the ratio of no. of boys to no. of girls<br>$\frac{25}{20} = \frac{5}{4}$ 5:4.<br>$\frac{15}{100} = \frac{15}{100} \times 20 = 3$<br>If a boy got 28 marks out of 40 then the percentage of marks = $\frac{28}{40} \times 100 = 70\%$ . Do more egs for getting practice.                                                                                                                                                                                                                        | 1-By asking oral question.<br>2- Home work<br>3- By solving questions on black board.<br>4- Class test<br><br>H/W ( Qns from exercises ) |
| INCREASE OR DECREASE PERCENT, DISCOUNT       | To identify whether increase or decrease in the amount and how to find its percentage.<br>Discount is reduction given on marked price. | Increase or decrease % = $\frac{\text{change in the amount}}{\text{initial amount (base)}} \times 100\%$<br>Discount = Marked price – Sale price<br>Discount % = $\frac{\text{discount}}{\text{Marked price}} \times 100\%$<br>Demonstrate different problems to understand the formulae.                                                                                                                                                                                                                                                                                                                                                      | Oral test<br><br>Dictation<br><br>Class Test                                                                                             |
| COST PRICE, SELLING PRICE , LOSS %/ PROFIT % | To understand the relation between cost price, selling price and profit/loss and how to find the loss/profit %                         | Make the children understand that Profit = Selling Price – Cost Price = SP – CP and loss = CP – SP<br>Profit % = $\frac{\text{profit}}{\text{CP}} \times 100$ and loss % = $\frac{\text{loss}}{\text{CP}} \times 100$<br>Explain the formula by doing different problems.                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                          |
| SALES TAX/ VALUE ADDED TAX                   | To understand the difference between sales tax and value added tax (VAT)                                                               | The amount ( a particular % of CP ) is collected by the shopkeeper in addition to the SP for submitting to the govt is called the sales tax.<br>In some situations the SP includes the tax, which is known as value added tax or VAT.<br>Take different questions from the daily life.                                                                                                                                                                                                                                                                                                                                                         | H/W                                                                                                                                      |
| COMPOUND INTEREST                            | To find the compound interest of a given amount with a given rate of interest for a particular period of time.                         | CI is calculated at the starting of each year by finding the simple interest on the amount = principal of the previous year + interest.<br>The formula developed for finding the amount after n years = $P(1 + \frac{r}{100})^n$<br>where P = Principal, r = rate of interest per annum, n = the no. of full years.<br>If the calculation is half yearly n becomes $\frac{n}{2}$ and r becomes $\frac{r}{2}$<br>CI = Amount - P<br>The same formula can be used in the case of growth problems. For egs population<br>In the case of depreciation the formula becomes $P(1 - \frac{r}{100})^n$<br>Demonstrate more examples in the class room. | Lab Activity<br><br>LAT                                                                                                                  |
