Joseph Ganem

Mathematics Grade August 2014:

The Robot Factory Joseph Ganem, 2018-08-27 This book exposes a disturbing misuse of the scientific method to advance policies and agendas that are in fact detrimental to both science and education. The author, a physics professor, examines two related trends in education: the practice of data-driven reform and the disparaging of the traditional liberal arts in favor of programs with a heavy emphasis on science and technology. Many of the reforms being foisted on educators have more in common with pseudo science than real science. The reduction of education to a commodity and the shilling of science as a means to enhance corporate profits lead to an impoverished and stunted understanding of science in particular and of education in general. How is it possible for schools with all students learning at grade level to be rated as failing, teachers to be rated as ineffective after all their students meet their learning outcomes, rising grade school math standards to result in more college students needing remedial math, politicians to disparage scientists and their results but argue that more students should study science? These bizarre outcomes have happened and are the result of an education system that misuses and misrepresents math and science in the classroom and in crafting education policies. This book exposes the flawed and fallacious thinking that is damaging education at all levels throughout the United States and makes a compelling case for rethinking the standardized, optimized and quantified approaches in vogue in education today to accommodate the different needs of individual teachers and students.
