## of math lesson plans

### 1st WEEK OF MATH

<b>M</b>	<p><b>WHAT WE ALREADY KNOW</b></p> <p><b>WHAT WE WANT TO LEARN</b></p>	<p>Before introducing any new concepts to your students, take some time to reflect on what they have already learned about math. Use the T-Chart to guide your discussion. Record students' ideas as they are discussing the topic. Students will fill out the graphic organizer based on what they already know and what they want to know. Use this as an opportunity to get excited about all of the new things you will learn this year!</p>
<b>T</b>	<p><b>MATHEMATICS CHART</b></p> <p><b>CAN DO</b> <b>HAVE</b> <b>ARE</b></p>	<p>Math can be intimidating for students, especially if they have struggled in the past. OR, math can be really exciting. We want to promote a LOVE of math in our classrooms. Use this Mathematics Chart to discuss things that Mathematicians CAN do, HAVE, and ARE. Reinforce that we are ALL going to be mathematicians this year. Students will make themselves as a mathematician.</p>
<b>W</b>	<p><b>MATH</b> <b>TOYS</b></p>	<p>Students often confuse math tools with toys because they can be so fun to work with! We want to set the tone for the year with our math tools. As a class, discuss the difference in a math tool and a toy. Sort the pictures while discussing. It's important to note that we can use many things for math, but we want to note the obvious differences.</p>
<b>TH</b>	<p><b>MATH MANIPULATIVES</b></p>	<p>At the beginning of the year, take time to introduce the math manipulatives to your students. This gives students an opportunity to use and explore the math tools before needing them for an assignment. For this activity, choose 4 manipulatives to rotate around the classroom. Students will use the math tools to explore, but will also fill out the following things on their recording sheet: name of math tool, draw/color a picture of the tool, make a guess as to what the tool is used for. Math tool examples: base ten blocks, linking cubes, coins, pattern blocks, clocks, etc.</p>
<b>F</b>	<p><b>COOPERATIVE LEARNING</b></p>	<p>This activity will help jumpstart cooperative learning in your classroom. You will need to divide your students into 5 groups. Students will work together to solve these puzzles WITHOUT talking (that is KEY). Rotate baggies/puzzles until each group has seen all 5. Students need to learn how to work together with hand movements, eye contact, and gestures. Reflect on how it feels to work together.</p>

Jaswal, Desiree Forsythe, 2024-09-24 Research demonstrates that STEM disciplines perpetuate a history of exclusion particularly for students with marginalized identities This poses problems particularly when science permeates every aspect of contemporary American life Institutions repeated failures to disrupt systemic oppression in STEM has led to a mostly white cisgender and male scientific workforce replete with implicit and or explicit biases Education holds one pathway to disrupt systemic linkages of STEM oppression from society to the classroom Maintaining

views on science as inherently objective isolates it from the world in which it is performed STEM education must move beyond the transactional approaches to transformative environments manifesting respect for students social and educational capital We must create a STEM environment in which students with marginalized identities feel respected listened to and valued We must assist students in understanding how their positionality privilege and power both historically and currently impacts their meaning making and understanding of STEM

**What We Work With** William C. McCoy,2002-10-28 Teachers are easily and often criticized New waves of criticism have gained momentum due to what some have termed our failing schools The schools and the teachers in particular have been singled out as targets for reproach based on flawed and often erroneous premises arrived at by many who have never spent a day in our schools and walked the walk with a teacher William McCoy writes from the perspective of more than twenty years experience in the public schools He knows that today too many students are arriving at school with poor attitudes that sooner or later reflect on their academic success and behavior These attitudes are formed from the beliefs and attitudes our youth encounter at

home and in the community His inside perspective on the countless other possible reasons schools are not measuring up to expectations makes the case for students parents and the community to realize we are all teachers children learn from everyone Knowing there is no one answer McCoy opens a new door of understanding of the educators dilemmas and predicament in an increasingly complicated profession
