How To Torque A Cylinder Head:

David Vizard's How to Port and Flow Test Cylinder Heads David Vizard, 2012 Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as the benefits of hand and CNC porting. You are also shown how to build a high quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads past the valves and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power. **How to Build Ford Flathead**

V-8 Horsepower George McNicholl, This is a follow up and companion to the successful *How to Build a Flathead Ford V-8*. This new edition describes the build up of a 1946-1948 model 59 engine with a 4 barrel carburetor, a blown French flathead engine, and a blown Ardun engine designed for street use. Many French flathead engines have been purchased by flathead lovers in the United States. There is a strong demand for those engine blocks, and the purchasers are desperate for any build up information. The popularity of the Ardun is amazing, and this second volume contains a load of new information about the Ardun, as well as information and photographs of the latest flathead goodies such as crankshafts, connecting rods, intake manifolds, and cylinder heads. *How to Build Max-Performance Mopar Big Blocks* Andrew Finkbeiner, 2009 Naturally aspirated Mopar Wedge big blocks are quite capable of producing between 600 to 900 horsepower. This book covers how to build Mopar's 383, 400, 413, 440 ci engines to these power levels. Discussed is how to select a stock or aftermarket block for the desired performance level. The reciprocating assembly is examined in detail so you select the right design and material for durability and performance requirements. Cylinder heads and valve train configurations are crucial for generating maximum horsepower and torque, and this volume provides special treatment in this area. Camshafts and lifters are compared and contrasted using hydraulic flat tappet, hydraulic roller, and solid flat tappet cams. Also detailed engine builds at 600, 700, 800, and 900 horsepower levels provide insight and reveal what can be done with real world component packages. *How to Rebuild & Modify Chevy 348/409 Engines* John Carollo, 2012 Chevy's W-series 348 and later the 409 became legends on the street. Recently the 348s and 409s have enjoyed a high performance renaissance, and many speed manufacturers are making heads, blocks, and virtually every part for these engines. **How to Build and Modify Chevrolet Small-Block V-8**
