

Neutral wire is a bundle of White (usually) wires in the box and are not used with standard rocker switch

Standard 3-Way Switch Neutral in Both Locations

This diagram illustrates a wiring configuration for two 3-way switches, S1 and S2, where a neutral wire is present in both switch locations. A 'Hot from breaker' line enters from the left and connects to the common terminal of switch S1. A neutral wire runs from the top left, through a box, to the top right, and then to the common terminal of switch S2. Traveler wires connect the traveler terminals of S1 to the traveler terminals of S2. A load (represented by a light bulb) is connected between the common terminal of S2 and the neutral wire. Labels include: 'Hot from breaker', 'Neutral', 'Traveler S1', 'Traveler S2', 'Traveler', 'Common Terminal', 'Load', and 'Light Bulb'.

The Common Terminals are always Hot on 1 switch and Load on the other

If we know which wires were connected to the COMMON terminal on the original switches then we know 1 is HOT the other is LOAD and we can figure which one is which by removing the switch turning on the breaker and testing with the voltage pin. Once we know where the HOT is then we know the LOAD is in the other box.
