

Stainless Steel Weld Process Selector Guide

COST PER POUND

Cost per pound is referencing commercial selling prices for each electrode type.

SPATTER LEVELS

Some processes, like SMAW by nature have a tendency to produce more spatter than other processes such as GTAW welding or SAW.

EQUIPMENT COMPLEXITY

GTAW, MCAW and GMAW equipment that have pulsed capability have more input variables and can be more complex than a process using a constant current (CC) or constant voltage (CV) power source.

SKILL LEVEL REQUIRED

The key to success in all welding joints is proper setup. However, some welding processes are more difficult to master than others. For this reason, GTAW requires the most skill.

BEAD APPEARANCE

Due to its high surface sheen, most stainless steel welds are required to blend well into the base material. GTAW accomplishes this, but is very slow. Conversely, a welder joining carbon to stainless steel may not be as concerned with the final bead appearance.

PRODUCTIVITY

The productivity scale is comparing the pounds per hour of weld metal deposited.

PORTABILITY/OUTDOOR USE

Processes relying on external shielding gas such as GTAW and GMAW are less suited for portable use than SMAW. While submerged arc welding could be implemented outdoors, the setup does not make it very portable.

PIPE WELDING PRODUCTIVITY

The 90° position requires all-position capable electrodes and will by nature have lower deposition rates. Roll pipe applications position the weld so that it is always in the flat position to maximize productivity and deposition rates.
