

Safe Manual Handling

Introduction

Legislation

The Health and Safety at Work Act 1974 requires employers to ensure the health and safety of their employees and to provide them with the necessary information, instruction, training and supervision to enable them to do so. The Health and Safety Regulations 1992 require employers to assess the risks to the health and safety of their employees and to take steps to control those risks. The Health and Safety Regulations 1992 also require employers to provide their employees with the necessary information, instruction, training and supervision to enable them to do so.

Types of injury

The spine is a jointed structure with a lot of flexibility. It is made up of vertebrae and intervertebral discs. The spine is designed to support the weight of the body and to allow movement. However, it is also vulnerable to injury. The most common types of injury to the spine are:

1. **Strain:** A strain is an injury to the muscles or ligaments that support the spine. It is usually caused by overexertion or by lifting a heavy object incorrectly.
2. **Stress:** A stress is an injury to the intervertebral discs. It is usually caused by repeated lifting or by lifting a heavy object incorrectly.
3. **Disks:** A disk is an injury to the intervertebral discs. It is usually caused by repeated lifting or by lifting a heavy object incorrectly.

Anywhere in the musculo-skeletal system can be injured

Risk Assessment

The purpose of a risk assessment is to identify the hazards associated with the task, to assess the risk of injury, and to take steps to control those risks. The risk assessment should be carried out by the employer or by a competent person. The risk assessment should be carried out before the task is carried out. The risk assessment should be carried out for all tasks that involve manual handling.

1. **Hazard:** The hazard is the potential for harm or damage. It is usually caused by a physical factor, such as a heavy object or a sharp edge.
2. **Exposure:** The exposure is the likelihood of the hazard occurring. It is usually caused by the way the task is carried out.
3. **Severity:** The severity is the potential for injury or damage. It is usually caused by the nature of the hazard.
4. **Control:** The control is the measure taken to reduce the risk of injury or damage. It is usually caused by the way the task is carried out.

The risk assessment should be carried out for all tasks that involve manual handling. The risk assessment should be carried out before the task is carried out. The risk assessment should be carried out for all tasks that involve manual handling.
