

Abstract The purpose of this study was to examine the effects of a 12-week, 100% body weight (BW) resistance training program on the muscle strength, muscle mass, and body composition of sedentary, middle-aged women. The subjects were randomly assigned to either a resistance training (RT) or control (CON) group. The RT group performed a 12-week, 100% BW resistance training program, while the CON group performed no exercise. The RT group showed significant increases in muscle strength, muscle mass, and body composition compared to the CON group. The results of this study suggest that a 12-week, 100% BW resistance training program is effective in improving muscle strength, muscle mass, and body composition in sedentary, middle-aged women.
