Current Trends in the Representation of Physical Processes in Weather and Climate Models David A. Randall, J. Srinivasan, Ravi S. Nanjundiah, Parthasarathi Mukhopadhyay, 2019-01-31 This book focuses on the development of physical parameterization over the last 2 to 3 decades and provides a roadmap for its future development. It covers important physical processes: convection, clouds, radiation, land surface, and the orographic effect. The improvement of numerical models for predicting weather and climate at a variety of places and times has progressed globally. However, there are still several challenging areas which need to be addressed with a better understanding of physical processes based on observations and to subsequently be taken into account by means of improved parameterization. And this is all the more important since models are increasingly being used at higher horizontal and vertical resolutions. Encouraging debate on the cloud resolving approach or the hybrid approach with parameterized convection and grid scale cloud microphysics and its impact on models' intrinsic predictability, the book offers a motivating reference guide for all researchers whose work involves physical parameterization problems and numerical models.

Severe Storms Someshwar Das, Wei-Kuo Tao, 2025-01-25 The book provides information on the observational aspects of the severe storms through satellite, radar, aircraft, and ground-based network of stations, and these issues are discussed in the first part of the book consisting of 8 chapters. The numerical modelling and data assimilation techniques are discussed in the second part of the book aimed at development of Early Warning Systems. 12 chapters, and finally the outlook of the severe storms in a changing climate scenario, their socio-economic impacts, and policies for disaster mitigation are discussed in the third part of the book consisting of 6 chapters. This book is of great interest to atmospheric scientists and other researchers, practitioners, policy and decision makers, international institutions, governmental and non-governmental organizations, educators, as well as students.

MasterClass in History Education Christine Counsell, Katharine Burn, Arthur Chapman, 2016-10-06 MasterClass in History Education draws on international research and practice to present effective and engaging approaches for history teachers who want to explore the ways in which reading research and reflection can support the development of history teaching and learning in the classroom. At the heart of the book is a series of professional enquiries carried out by experienced history teachers working in a range of contexts. Each history teacher addresses clear questions arising from their practice, and together they illustrate various approaches to data collection, data analysis, and argument. These history teachers also show how they drew on diverse scholarship in history and history education, including many publications by other history teachers. In eight further chapters, other experts ranging from practitioner scholars to researchers in diverse fields such as history, history education, teacher education, teacher research, and curriculum theory reflect on the distinctive insights that these teachers offer and explore connections with their own fields. The combination of perspectives and the depth of knowledge of the varied contributors reveal the importance of different kinds of relationship between theory and practice. The links between classroom realities

and research and the critical use of different kinds of text will support history teachers in developing their practice and professional voice

2014 China Functional Materials Technology and Industry Forum Guang Ming Zhao, Li Xin Chen, Yu Tang, Lang He, Bin Long, Zun Yu Nie, Hao Hua Chen, 2014-12-17 Selected peer reviewed papers from the 2014 China Functional Material Technology and Industry Forum CFMTIF 2014 August 26-28 2014 Xi'an China Technological Advancements and Innovations in Future of Education Samira Hosseini, Brian Beitzel, Marcel Köhler, Fida Sanjakdar, 2024-10-31 This book contains peer reviewed selected papers from the 6th International Conference on the Future of Education FOE 2023. It presents excellent educational practices and technologies complemented by various innovative approaches that enhance educational outcomes. The conference in particular places great attention on solutions to educational problems that are highly aligned with four Sustainable Development Goals from the seventeen goals designed by UNESCO. The book focuses on quality education, industry innovation and infrastructure, reduced inequalities, etc. The FOE 2023 proceedings offer contributions covering a diverse range of innovations and technology in education and how they may facilitate the current stages of education and shape future avenues for offering quality and accessible education. Moreover, the articles presented in this book present dynamic computing and pedagogical approaches to empower learners and educators across the globe. As our planet continues to tackle international crises including poverty, climate change, limited access to technological tools and global pandemics, remote and/or online teaching and learning find paramount importance, which has also been considered a powerful theme in the presented articles. These essential components highly contribute to reduced inequalities serving learners from higher education levels to lifelong learners while playing a crucial role in closing the gap between the skill set obtained by the graduates and those demanded by the job market. *Chinese Higher Education Reform and Social Justice* Bin Wu, W. John Morgan, 2015-06-26 In place of a distributive justice perspective which focuses simply on equal access to universities, this book presents a broader understanding of the relationship between Chinese higher education and economic and social change. The necessity for research on the place of universities in contemporary Chinese society may be seen from current debates about and policy towards issues of educational inequality at Chinese universities. Many questions arise as a consequence: What are the limitations of neo-liberalism in higher education policy and what are the alternatives? How has the Chinese government met the challenges of educational inequality and what lessons may be learned from its recent initiatives? How may higher education enhance social justice in Chinese society given economic, social and cultural inequality? What may be learned from the experience of Macau, Hong Kong and of Taiwan in terms of achieving social justice in Chinese universities? These questions are considered by a group of leading scholars from both inside and outside China. *Advanced Frequency Regulation Strategies in Renewable-Dominated Power Systems* Sandeep Dhundhara, Yogendra Arya, Ramesh C.
