progress when it comes to providing every child with a quality education. The problem wasn't one of the usual scapegoats: lazy teachers, shoddy facilities, lack of accountability. It was something no one was talking about: the elementary school curriculum's intense focus on decontextualized reading comprehension skills at the expense of actual knowledge. In the tradition of Dale Russakoff's *The Prize* and Dana Goldstein's *The Teacher Wars*, Wexler brings together history, research, and compelling characters to pull back the curtain on this fundamental flaw in our education system, one that fellow reformers, journalists, and policymakers have long overlooked and of which the general public, including many parents, remains unaware. But *The Knowledge Gap* isn't just a story of what schools have gotten so wrong; it also follows innovative educators who are in the process of shedding their deeply ingrained habits and describes the rewards that have come along for students who are not only excited to learn but are also acquiring the knowledge and vocabulary that will enable them to succeed. If we truly want to fix our education system and unlock the potential of our neediest children, we have no choice but to pay attention.

Mental Maps Janne Holmén, Norbert Götz, 2021-11-28. The concept of mental maps is used in several disciplines, including geography, psychology, history, linguistics, economics, anthropology, political science, and computer game design. However, until now, there has been little communication between these disciplines and methodological schools involved in mental mapping. *Mental Maps: Geographical and Historical Perspectives* addresses this situation by bringing together scholars from some of the related fields. Ute Schneider examines the development of German geographer Heinrich Schiffrer's mental maps using his books on Africa from the 1930s to the 1970s. Efrat Ben Ze'ev and Chloé Yvroux investigate conceptions of Israel and Palestine, particularly the West Bank, held by French and Israeli students. By superimposing large numbers of sketch maps, Clarisse Didelon, Loiseau Sophie de Ruffray, and Nicolas Lambert identify soft and hard macro regions on the mental maps of geography students across the world. Janne Holmén investigates whether the Baltic and the Mediterranean Seas are seen as links or divisions between the countries that line their shores according to the mental maps of high school seniors. Similarly, Dario Musolino maps regional preferences of Italian entrepreneurs. Finally, Lars Erik Edlund offers an essayistic account of mental mapping based on memories of maps in his own family. This edited volume book uses printed maps, survey data, and hand-drawn maps as sources contributing to the study of human perception of space from the perspectives of different disciplines. The chapters in this book were originally published as a special issue of the *Journal of Cultural Geography*. *Psychosocial Skills and School Systems in the 21st Century* Anastasiya A. Lipnevich, Franziska Preckel, Richard D. Roberts, 2016-04-02. This book provides a comprehensive overview and in-depth analysis of research on psychosocial skills, examining both theory and areas of application. It discusses students' psychosocial skills both as components of academic success and desired educational outcomes in grades K through 12. The book describes an organizing framework for psychosocial skills and examines a range of specific constructs that includes achievement, motivation, self-efficacy, creativity, emotional intelligence, resilience, and the need for cognition. In addition, it reviews specific school-based

interventions and examines issues that concern the malleability of psychosocial skills. It addresses issues relating to the integration of psychosocial skills into school curriculum as well as large scale assessment policies. Topics featured in this book include Development of psychosocial skills in grades K-12, Assessment of psychosocial skills, Conscientiousness in education and its relation to meaningful educational outcomes, Creativity in schools including theory, assessment and interventions, Academic emotions and their regulation through emotional intelligence, Resilience and school based programs aimed at enhancing it. *Psychosocial Skills and School Systems in the 21st Century* is a must have resource for researchers, graduate students, clinicians, mental health professionals and policymakers in child and school psychology, educational policy and politics, public health, social work, developmental psychology and educational psychology. The ^AFuture of Schools and Teacher Education Eduardo Andere, 2020-04-01. This book documents the main curricula changes in Finland as they begin to develop in 2016, 2017 and 2018 onwards. Drawing from 14 original case studies, the book presents the stories of 14 principals and 29 teachers with a systematic and methodological uniformity. Intertwining the Finnish example with a greater narrative about how universities are changing their teacher education to face the complex challenges of education in the 21st century, this book documents cutting edge advancement in the field of international school education. **Assessment in Geographical Education: An International Perspective** Theresa Bourke, Reece Mills, Rod Lane, 2022-02-27. In recent years there has been increased attention paid to the importance of assessment in Geographical Education, the chosen subject for this book. Assessment is an important tool for collecting information about student learning and for providing timely data to inform key stakeholders including students, teachers, parents and policymakers. To be effective, assessment needs to be valid, reliable and fair. Validity is about ensuring that we assess what we claim we are assessing. Reliability is about measuring performance and understanding in a consistent way. Without validity and reliability, assessment is unlikely to provide equitable opportunities for students to demonstrate what they know and can do. As geography educators, it is therefore important that we identify the core concepts and skills in geography that we want students to master. We need a clear understanding of what the progression of learning looks like for each concept and skill so we can develop fit for purpose assessments that track and improve student learning. While there is a substantial literature on evidence based assessment in secondary school contexts, research exploring best practice assessment in geography is rare. This is a concern given the distinctive nature of geography and the important role of assessment in the learning process. This scholarly collection seeks to address this issue by connecting research in educational assessment with the domain of geography. The chapters are written by leading researchers in Geographical Education from across the globe. These chapters provide examples of innovation through the collective voices of geography teacher educator scholars from across Australia, USA, South Korea, Germany, Switzerland and Singapore. What unifies the work in this book is that each chapter focuses on a key feature of the discipline of geography, providing scholarly examples of evidence based practices for assessing student's knowledge and

skills **Civics and Citizenship Education in Australia** Andrew Peterson, Libby Tudball, 2016-11-17 Civics and Citizenship Education in Australia provides a comprehensive analysis of teaching and learning in this field in Australian schools drawing on case study material to demonstrate the current practice in the field Reflecting on the issues and possibilities raised by the inclusion of civics and citizenship education in the new national Australian curriculum leading national and international scholars analyse the subject's theoretical curricular and pedagogical bases and approaches Placing civics and citizenship education within historical and contemporary contexts the book critically explores a range of issues concerning the development organisation and teaching of the subject These include how the subject might include indigenous global and Asian perspectives and how it may help students to engage with issues around sustainability active citizenship diversity religion and values The final chapters written by scholars from England the USA Canada Hong Kong and Singapore adopt a comparative approach situating Australian civics and citizenship education in the wider international context
