South Africa's Water Predicament Anja du Plessis, 2023-01-13 The book provides a critical evaluation of South Africa's freshwater resources to illustrate the way in which its freshwater resources water access services and infrastructure have continued to decline over the past three decades The continued decline of water governance management water service delivery dilapidated water infrastructure dysfunctional local governments and overall excessive water degradation is illustrated and emphasized using real life examples and case studies from various contexts within the country The main argument of the book is that South Africa's freshwater resources have declined to such an extent that it can be described as a predicament Questionable water

governance decisions and reactive water management practices have led to no improvement and or increased degradation of freshwater resources An overall lack of service delivery exists across the country in various contexts leading to further water and social decline An inter disciplinary evaluation of South Africa s current water predicament is provided major water crises are prioritized and suitable recommendations are given to transform its predicament into problems which can be addressed Suitable background information is given to emphasize the necessity of good water governance management and service delivery South Africa s freshwater resources are evaluated with specific focus on the decline of informed water governance management service delivery and water quality Factors requiring urgent attention are determined and suitable recommendations and or actions are provided An evaluation and overall synthesis focused on the transformation of the predicament into problems is provided Primary water problems are prioritized according to urgency and suitable recommendations are given to assist in transforming the country s current complex water predicament into simpler water problems Political will collaboration with researchers stakeholders non governmental organizations and cooperation of civil society is required South Africa s already scarce freshwater resources and decaying infrastructure will persist and possibly collapse if no major actions or interventions are implemented

Rescaling municipal governance amidst political competition in Gauteng: Sedibeng's proposed re-demarcation Thembani Mkhize, 2021-08-27 In 2011 the Gauteng Provincial Government proposed that Sedibeng a Category C district municipality located in the province should be restructured Although the original proposal had anticipated that this would happen after the 2016 local elections the issue remains unresolved due largely to fierce party political opposition and vociferous protests against it on the ground This Occasional Paper examines the dynamics particularities peculiarities and challenges of re demarcating the Gauteng City Region While informed by technical reasons the arguments for and against the merger have tended to gravitate more towards party political rationales for why the re demarcation should or should not go ahead Although these debates raise important merits and demerits for the proposal they are difficult to disentangle from the interests of those whose fortunes would be changed by restructuring In this environment municipal demarcation risks being held hostage by party politics with stakeholders such as political parties using any means at their disposal to have things go their way including by scapegoating the Municipal Demarcation Board MDB The case of Sedibeng presents important lessons about attempts to make post transition local government and mechanisms for determining its configuration work for Gauteng It also highlights the need for strengthening and revising demarcation related legislation How can we make sure that the MDB functions effectively with respect to its primary goals

Entropy Applications in Environmental and Water Engineering Huijuan Cui, Bellie Sivakumar, Vijay P. Singh, 2019-03-07 Entropy theory has wide applications to a range of problems in the fields of environmental and water engineering including river hydraulic geometry fluvial hydraulics water monitoring network design river flow forecasting floods and droughts river network analysis infiltration soil moisture sediment transport surface water and groundwater

quality modeling ecosystems modeling water distribution networks environmental and water resources management and parameter estimation Such applications have used several different entropy formulations such as Shannon Tsallis Rnyi Burg Kolmogorov Kapur configurational and relative entropies which can be derived in time space or frequency domains More recently entropy based concepts have been coupled with other theories including copula and wavelets to study various issues associated with environmental and water resources systems Recent studies indicate the enormous scope and potential of entropy theory in advancing research in the fields of environmental and water engineering including establishing and explaining physical connections between theory and reality The objective of this Special Issue is to provide a platform for compiling important recent and current research on the applications of entropy theory in environmental and water engineering The contributions to this Special Issue have addressed many aspects associated with entropy theory applications and have shown the enormous scope and potential of entropy theory in advancing research in the fields of environmental and water engineering
