1.2 General working principle

This AEG appliance stores, heats and provides boiling drinking water in addition to cold and warm water.

To supply boiling water, cold water flows from the cold water supply to the boiler, where it is heated to 100 °C. From the boiler the boiling water flows to the tap.

The cold water also flows from the cold water supply directly to the cold water inlet on the tap.

There are two ways to provide the tap with warm water:

- Warm water can be supplied by connecting the warm water supply, if available, to the warm water inlet on the tap. This situation is named the solo configuration.
- Cold water and boiling water from the boiler can be mixed with the mixing valve. The mixed water outlet of the mixing valve can be connected to the warm water inlet on the tap. This situation is named the combi configuration.
