

The external input can be used as a remote trigger simply by connecting it to any kind of switch, button, or programmable ECU output that grounds the blue wire to the vehicle earth when activated. For ideas on different ways to use the external input, see page 14. Once connected, the purpose of the external input must be configured within the "INPUT" sub-menu within the menu (see page 12).

The yellow wire currently has no purpose, it is intended for use with future features.

If either the blue or yellow wire are not used, simply cut or bundle them and make sure they are insulated.

**WARNING!** Do NOT connect the blue or yellow wire to a 12V source as this could damage the unit.
