new title to indicate that it contains much new material The primary changes are the addition of two new chapters one on nonparametric regression and one on response surface maximization As before the presentations focus on the linear model aspects of the subject For example in the nonparametric regression chapter there is very little about kernel regression estimation but quite a bit about series approximations splines and regression trees all of which can be viewed as linear modeling The new edition also includes various smaller changes Of particular note are a subsection in Chapter 1 on modeling longitudinal repeated measures data and a section in Chapter 6 on covariance structures for spatial lattice data I would like to thank Dale Zimmerman for the suggestion of incorporating material on spatial lattices Another change is that the subject index is now entirely alphabetical
