Installation tips – changing timing belts

Described using the Renault Clio II 1.6 16V engine code K4M 748 as an example

Renault installs a large number of the Clio II 1.6 16V engine, with differing engine displacement, in their vehicles. When the timing belts are changed, critical mistakes are made again and again that have a negative effect on the belt drive. To ensure that changing the belts goes smoothly, ContiTech Power Transmission Group is providing mechanics with a detailed list of installation tips. Step by step, ContiTech experts explain how to replace belts correctly.

When the timing belts are changed, the tension pulley, the guide pulley and the water pump should be replaced, too. Renault recommends a belt change every 100,000 km for all models up to 1999, and every 120,000 km for all later models, or for low mileages.

In order to do this, mechanics require a crankshaft locking pin, Renault tool code MOT1489, and a camshaft alignment ruler, Renault tool code MOT1496. The working time is for the Clio about 2.7, for the Mégane 3.6, for the Mégane Scénic 3.9 and for the Laguna 2.5 hours.

Preparatory work:

Identify the vehicle using the engine code on the engine block (Fig. 1). Disconnect the vehicle's battery.

Fig. 1
