

Chapter 2- exercises

1. Wined is a viticultural who produces wine from grapes grown on his own property. Which of Wined's assets is subject to IAS 41?
 - a. Theo 4,000 tons of grapes in the holding bay waiting to be processed into wine.
 - b. The 400 hectares of land that was acquired by Wined's great-grand-father.
 - c. The 3,500,000 bottles of wine stored in a refrigerated warehouse holding the produce last year's yield.
 - d. **The 300,000 grape vines that have been producing grapes for 4 generations of Wined's family.**
2. Masan owned cattle recorded in the financial statements at \$5,250 on 1 January 20X4. At 31 December 20X4 the cattle have a fair value of \$6,500. If Masan sold the cattle, commission of 2% would be payable. What is the correct accounting treatment for the cattle at 31 December 20X4 according to IAS 41 Agriculture?
 - a. Hold at cost of \$5,250.
 - b. Revalue to \$6,500, taking gain of \$1,250 to the statement of profit or loss.
 - c. Revalue to \$6,500, taking gain of \$1,250 to the revaluation surplus.
 - d. **Revalue to \$6,370, taking gain of \$1,120 to the statement of profit or loss.**
$$6500 \times 0.98 = 6370$$

Fair Value – cost of sales, taking gain or loss to the statement of PnL

3. The following is an extract from the 2013 Annual Report of SIPEF NV:
Because of the inherent uncertainty associated with the valuation at fair value of the biological assets due to the volatility of the prices of the agricultural produce and the absence of a liquid market, their carrying value may differ from their realisable value. Given the inherent uncertainty in applying IAS 41, discuss whether the pre-IAS 41 practice of value at historical cost is preferable for the statement of financial position.
4. Agriculture is a key business activity in many parts of the world, particularly in developing countries. Following extensive discussions with, and funding from, the World Bank, the International Accounting Standards Committee (IASC) developed an accounting standard relating to agricultural activity. IAS 41 Agriculture was published in 2001 to apply to accounting periods beginning on or after 1 January 2003. Sigma prepares financial statements to 30 September each year. On 1 October 2003 Sigma carried out the following transactions:
 - Purchased a large piece of land for \$20 million.
 - Purchased 10,000 dairy cows (average age at 1 October 2003, two years) for \$1 million.
 - Received a grant of \$400,000 towards the acquisition of the cows. This grant was non-returnable. During the year ending 30 September 2004 Sigma incurred the following costs:
 - \$500,000 to maintain the condition of the animals (food and protection).

Luenberger Chapter 2 Exercise 2 Answer:

Linear and Nonlinear Programming David G. Luenberger, 2003-09-30 The original edition of this book was celebrated for its coverage of the central concepts of practical optimization techniques This updated edition expands and illuminates the connection between the purely analytical character of an optimization problem expressed by properties of the necessary conditions and the behavior of algorithms used to solve a problem Incorporating modern theoretical insights this classic text is even more useful

Nonlinear Programming Mokhtar S. Bazaraa, Hanif D. Sherali, C. M. Shetty, 2013-06-12
COMPREHENSIVE COVERAGE OF NONLINEAR PROGRAMMING THEORY AND ALGORITHMS THOROUGHLY REVISED AND EXPANDED Nonlinear Programming Theory and Algorithms now in an extensively updated Third Edition addresses the problem of optimizing an objective function in the presence of equality and inequality constraints Many realistic problems cannot be adequately represented as a linear program owing to the nature of the nonlinearity of the objective function and or the nonlinearity of any constraints The Third Edition begins with a general introduction to nonlinear programming with illustrative examples and guidelines for model construction Concentration on the three major parts of nonlinear programming is provided Convex analysis with discussion of topological properties of convex sets separation and support of convex sets polyhedral sets extreme points and extreme directions of polyhedral sets and linear programming Optimality conditions and duality with coverage of the nature interpretation and value of the classical Fritz John FJ and the Karush Kuhn Tucker KKT optimality conditions the interrelationships between various proposed constraint qualifications and Lagrangian duality and saddle point optimality conditions Algorithms and their convergence with a presentation of algorithms for solving both unconstrained and constrained nonlinear programming problems Important features of the Third Edition include New topics such as second interior point methods nonconvex optimization nondifferentiable optimization and more Updated discussion and new applications in each chapter Detailed numerical examples and graphical illustrations Essential coverage of modeling and formulating nonlinear programs Simple numerical problems Advanced theoretical exercises The book is a solid reference for professionals as well as a useful text for students in the fields of operations research management science industrial engineering applied mathematics and also in engineering disciplines that deal with analytical optimization techniques The logical and self contained format uniquely covers nonlinear programming techniques with a great depth of information and an abundance of valuable examples and illustrations that showcase the most current advances in nonlinear problems

Nonlinear Programming Peter Zörnig, 2014-01-31 This book is an introduction to nonlinear programming It deals with the theoretical foundations and solution methods beginning with the classical procedures and reaching up to modern methods like trust region methods or procedures for nonlinear and global optimization A comprehensive bibliography including diverse web sites with information about nonlinear programming in particular software is presented Without sacrificing the necessary mathematical rigor excessive formalisms are avoided Several examples exercises with detailed

solutions and applications are provided making the text adequate for individual studies The book is written for students from the fields of applied mathematics engineering economy and computation **Dynamic Economic Analysis** Milton Harris,1987 In industrial organization and labour economics many of the most interesting recent contributions have encompassed explicit dynamics as well as extensive form games This book collects and explains a number of the most widely used techniques in dynamic economic analysis **Numerical Solution of Elliptic and Parabolic Partial Differential Equations with CD-ROM** John Arthur Trangenstein,2013-04-18 For mathematicians and engineers interested in applying numerical methods to physical problems this book is ideal Numerical ideas are connected to accompanying software which is also available online By seeing the complete description of the methods in both theory and implementation students will more easily gain the knowledge needed to write their own application programs or develop new theory The book contains careful development of the mathematical tools needed for analysis of the numerical methods including elliptic regularity theory and approximation theory Variational crimes due to quadrature coordinate mappings domain approximation and boundary conditions are analyzed The claims are stated with full statement of the assumptions and conclusions and use subscripted constants which can be traced back to the origination particularly in the electronic version which can be found on the accompanying CD ROM **Modern Robotics** Kevin M.
