Distributed Computing Dr. K. Ramesh Kumar, **E. F. Codd and Relational Theory: A Detailed Review and Analysis of Codd's Major Database Writings** C. J. Date, 2019-07-18 E F Codd's relational model of data has been described as one of the three greatest inventions of all time the other two being agriculture and the scientific method and his receipt of the 1981 ACM Turing Award the top award in computer science for inventing it was thoroughly deserved The papers in which Codd first described his model were staggering in their originality they had and continue to have a huge impact on just about every aspect of the way we do business in the world today And yet few people even in the professional database community are truly familiar with those papers This book is an attempt to remedy this sorry state of affairs In it well known author C J Date provides a detailed examination of all of Codd's major technical publications explaining the nature of his contribution in depth and in particular highlighting not only the many things he got right but also some of the

things he got wrong Process Modeling and Management for Healthcare Carlo Combi, Giuseppe Pozzi, Pierangelo Veltri, 2017-11-09 From the Foreword This book provides a comprehensive overview of the fundamental concepts in healthcare process management as well as some advanced topics in the cutting edge research of the closely related areas This book is ideal for graduate students and practitioners who want to build the foundations and develop novel contributions in healthcare process modeling and management Christopher Yang Drexel University Process modeling and process management are traversal disciplines which have earned more and more relevance over the last two decades Several research areas are involved within these disciplines including database systems database management information systems ERP operations research formal languages and logic Process Modeling and Management for Healthcare provides the reader with an in depth analysis of what process modeling and process management techniques can do in healthcare the major challenges faced and those challenges remaining to be faced The book features contributions from leading authors in the field The book is structured into two parts Part one covers fundamentals and basic concepts in healthcare It explores the architecture of a process management environment the flexibility of a process model and the compliance of a process model It also features a real application domain of patients suffering from age related macular degeneration Part two of the book includes advanced topics from the leading frontiers of scientific research on process management and healthcare This section of the book covers software metrics to measure features of the process model as a software artifact It includes process analysis to discover the formal properties of the process model prior to deploying it in real application domains Abnormal situations and exceptions as well as temporal clinical guidelines are also presented in depth Pro *Decentralized Query Processing over Heterogeneous Sources of Knowledge Graphs* Lars Heling, 2022-03-15 Knowledge graphs are increasingly used in scientific and industrial applications The large number and size of knowledge graphs published as Linked Data in autonomous sources has led to the development of various interfaces to query these knowledge graphs Therefore effective query processing approaches that enable efficient information retrieval from these knowledge graphs need to address the capabilities and limitations of different Linked Data Fragment interfaces This book investigates novel approaches to addressing the challenges that arise in the presence of decentralized heterogeneous sources of knowledge graphs The effectiveness of these approaches is empirically evaluated and demonstrated using various real world and synthetic large scale knowledge graphs throughout First a sample based approach for generating fine grained performance profiles is proposed and it is demonstrated how the information from such profiles can be leveraged in cost model based query planning In addition a sample based data distribution profiling approach is advocated which aims to estimate the statistical profile features of large knowledge graphs and the applicability of these estimations in federated querying processing is demonstrated The remainder of the book focuses on techniques to devise efficient query processing approaches when heterogeneous interfaces need to be queried but no fine grained statistics are available Robust techniques to support

efficient query processing in these circumstances are investigated and results are shared to demonstrate the way in which these techniques can outperform state of the art approaches Finally the author describes a framework for federated query processing over heterogeneous federations of Linked Data Fragments to exploit the capabilities of different sources by defining interface aware approaches
