Frp Design Manual:

Composites for Construction Lawrence C. Bank, 2006-07-21 The first textbook on the design of FRP for structural engineering applications Composites for Construction is a one of a kind guide to understanding fiber reinforced polymers FRP and designing and retrofitting structures with FRP Written and organized like traditional textbooks on steel concrete and wood design it demystifies FRP composites and demonstrates how both new and retrofit construction projects can especially benefit from these materials such as offshore and waterfront structures bridges parking garages cooling towers and industrial buildings The code based design guidelines featured in this book allow for demonstrated applications to immediately be implemented in the real world Covered codes and design guidelines include ACI 440 ASCE Structural Plastics Design Manual EUROCOMP Design Code AASHTO Specifications and manufacturer published design guides Procedures are provided to the structural designer on how to use this combination of code like documents to design with FRP profiles In four convenient sections Composites for Construction covers An introduction to FRP applications products and properties and to the methods of obtaining the characteristic properties of FRP materials for use in structural design The design of concrete structural members reinforced with FRP reinforcing bars Design of FRP strengthening systems such as strips sheets and fabrics for upgrading the strength and ductility of reinforced concrete structural members The design of trusses and frames made entirely of FRP structural profiles produced by the pultrusion process **Design Manual** Frederick Jr Rubel, 2003

Design Guide for FRP Composite Connections Ayman S. Mosallam, 2011 Sponsored by the Construction Institute of ASCE This Manual of Practice covers major issues related to the analysis and design of composite joints and frame connections manufactured from fiber reinforced polymer FRP composites in general and pultruded PFRP composites in particular Topics include design philosophy and design considerations for structural composite members and connections basic information and research and development work on the mechanics of fasteners and bolted composite joints analysis and design methods for bolted composite joints basic physical and mechanical information on structural adhesives and bonded composite joints analysis and design methods for bonded composite joints structural performance combined bolted bonded joints basic information and research and development related to PFRP framing connections analysis and design methods for PFRP framing connections and numerical analysis review of available finite element codes suitable for modeling and designing composite frame structures MOP 102 addresses issues that are lacking in other national and international standards design manuals and technical publications It will be valuable to structural engineers designing with FRP or PFRP composites
