Administration (U S),2012-10-04 The projections in the U S Energy Information Administration's EIA's Annual Energy Outlook 2012 AEO2012 focus on the factors that shape the U S energy system over the long term Under the assumption that current laws and regulations remain unchanged throughout the projections the AEO2012 Reference case provides the basis for examination and discussion of energy production consumption technology and market trends and the direction they may take in the future It also serves as a starting point for analysis of potential changes in energy policies But AEO2012 is not limited to the Reference case It also includes 29 alternative cases see Appendix E Table E1 which explore important areas of uncertainty for markets technologies and policies in the U S energy economy Many of the implications of the alternative

cases are discussed in the Issues in focus section of this report Key results highlighted in AEO2012 include continued modest growth in demand for energy over the next 25 years and increased domestic crude oil and natural gas production largely driven by rising production from tight oil and shale resources As a result U S reliance on imported oil is reduced domestic production of natural gas exceeds consumption allowing for net exports a growing share of U S electric power generation is met with natural gas and renewables and energy related carbon dioxide emissions remain below their 2005 level from 2010 to 2035 even in the absence of new Federal policies designed to mitigate greenhouse gas GHG emissions Executive Summary p 2

Green Australia Steve Lancaster, 2012 Green Australia A snapshot examines the ways in which Australians are attempting to reduce their ecological footprint both at home and at work In 2009 the CO2 Energy Emissions Index found that Australia had overtaken the USA to become the largest per capita emitter of greenhouse gases in the world a legacy of dependence on coal fired power stations the widespread adoption of conventional farming techniques heavy reliance on vehicles powered by fossil fuel dirty industrial practices and a growing mountain of waste Yet in recent years there has been a growing awareness that climate change is beginning to bite the recent drought and devastating floods suggesting that more extreme weather patterns are likely unless significant steps are taken to combat global warming Using case studies and up to date research this book demonstrates that although much more needs to be done if Australia is to secure a carbon neutral future some Green shoots are beginning to emerge
