The Inner Level Richard Wilkinson,Kate Pickett,2018-06-07 Why is the incidence of mental illness in the UK twice that in Germany Why are Americans three times more likely than the Dutch to develop gambling problems Why is child well being so much worse in New Zealand than Japan As this groundbreaking study demonstrates the answer to all these hinges on inequality In The Spirit Level Richard Wilkinson and Kate Pickett put inequality at the centre of public debate by showing conclusively that less equal societies fare worse than more equal ones across everything from education to life expectancy The Inner Level now explains how inequality affects us individually how it alters how we think feel and behave It sets out the overwhelming evidence that material inequalities have powerful psychological effects when the gap between rich and poor increases so does the tendency to define and value ourselves and others in terms of superiority and inferiority A deep well of data and analysis is drawn upon to empirically show for example that low social status is associated with elevated levels of stress and how rates of anxiety and depression are intimately related to the inequality which makes that status paramount Wilkinson and Pickett describe how these responses to hierarchies evolved and why the impacts of inequality on us are so severe In doing so they challenge the conception that humans are innately competitive and self interested They undermine too the idea that inequality is the product of natural differences in individual

Islamic finance's phenomenal growth owes to the Shariah compliant nature of its financial instruments. Shariah forbids the charging of interest *Riba* and instead promulgates risk sharing and trade based modes of financing. The Islamic financial industry has been subject to both critique and admiration. Critics argue that Islamic instruments bearing debt based structures differ from their conventional counterparts only in legal lexicon and not in economic impact. The admirers argue that such instruments irrespective of wider economic implications rigorously comply with juristically sound Islamic principles. This book aims to reconcile the above dispute. It argues that the financial impact of instruments is a consequence of the way they are priced and structured. The similarity in pricing and structures is an outcome not of the underlying Islamic financial modes but of the competitive environment in which Islamic instruments compete. Even risk sharing and trade based Islamic structures if implemented in such an environment would have a financial impact similar to that of conventional instruments. This book has a wider appeal for both academic and non academic audiences. It can complement undergraduate and graduate courses as an additional reading on the intricacies of Islamic financial instruments and markets. For PhD students it would help identify future research areas. To non academics it offers a deeper understanding regarding the working of the Islamic finance industry. The Economics of Inequality, Poverty, and Discrimination in the 21st Century Robert S.

Rycroft, 2013-03-07. Leading scholars examine the conflicting paradigms of affluence and destitution in the United States as well as other free societies and discuss the influence of education, race and status on economic mobility. While recent catastrophic events in New Orleans and Haiti may have magnified issues of social inequity, leaders have debated over poverty and discrimination for decades. Are the poor disadvantaged by the institutions of society or by the choices they make? Through two insightful volumes, the author examines differing academic and political perspectives to help shed light on the causes of poverty and inequality, the role that gender, race, age or sexual preference plays in determining opportunity and the effectiveness of current social and economic policies in balancing the inequity among disparate groups. The Economics of Inequality, Poverty and Discrimination in the 21st Century consists of 2 volumes containing 32 papers divided into 5 categories: measurement, inequality and mobility, institutions and choices, demographic groups and discrimination, and policy. The papers, written by economists, sociologists, philosophers and lawyers, deal with the extent of inequality in the United States and how it compares to other countries and the newly emerging evidence on the relationship between inequality and mobility within a society.
