Gradually and step by step you will be taught how to use SQLite in Java. In chapter one you will learn How to create SQLite database and six tables. In chapter two you will study Creating the initial three table projects in the school database Teacher table TClass table and Subject table. Creating database configuration files. Creating a Java GUI for viewing and navigating the contents of each table. Creating a Java GUI for inserting and editing tables and Creating a Java GUI to join and query the three tables. In chapter three you will learn Creating the main form to connect all forms. Creating a project will add three more tables to the school database the Student table the Parent table and Tuition table. Creating a Java GUI to view and navigate the contents of each table. Creating a Java GUI for editing inserting and deleting records in each table. Creating a Java GUI to join and query the three tables and all six tables. In chapter four you will study how to query the six tables. In chapter five you will create Bank database and its four tables. In chapter six you will learn the basics of cryptography using Java. Here you will learn how to write a Java program to count Hash MAC Message Authentication Code store keys in a KeyStore generate PrivateKey and PublicKey encrypt decrypt data and generate and verify digital prints. In chapter seven you will learn how to create and store salt passwords and verify them. You will create a Login table. In this case you will learn how to implement generating and verifying digital prints and storing the results into a database. In chapter nine you will create a Client_Data table which has the following seven fields client_data_id primary key account_id primary_key birth_date address mother_name telephone and photo_path. In chapter ten you will create Crime database and its six tables. In chapter eleven you will be taught how to extract image features utilizing BufferedImage class in Java GUI. In chapter twelve you will be taught to create Java GUI to view edit insert and delete Suspect table data. This table has eleven columns suspect_id primary key suspect_name birth_date case_date report_date suspect_status arrest_date mother_name address telephone and photo. In chapter thirteen you will be

taught to create Java GUI to view edit insert and delete Feature_Extraction table data This table has eight columns feature_id primary key suspect_id foreign key feature1 feature2 feature3 feature4 feature5 and feature6 All six fields except keys will have a BLOB data type so that the image of the feature will be directly saved into this table In chapter fourteen you will add two tables Police_Station and Investigator These two tables will later be joined to Suspect table through another table File_Case which will be built in the seventh chapter The Police_Station has six columns police_station_id primary key location city province telephone and photo The Investigator has eight columns investigator_id primary key investigator_name rank birth_date gender address telephone and photo Here you will design a Java GUI to display edit fill and delete data in both tables In chapter fifteen you will add two tables Victim and File_Case The File_Case table will connect four other tables Suspect Police_Station Investigator and Victim The Victim table has nine columns victim_id primary key victim_name crime_type birth_date crime_date gender address telephone and photo The File_Case has seven columns file_case_id primary key suspect_id foreign key police_station_id foreign key investigator_id foreign key victim_id foreign key status and description Here you will also design a Java GUI to display edit fill and delete data in both tables
