

Chemistry – Unit 7 Review

Chemical Reaction Model

1. Describe key characteristics of all chemical reactions, including the role of energy. Explain how a balanced equation represents these features (include an example).

In chemical reactions, atoms of the reactants recombine to form new substances in the products. There is almost always some transfer between the thermal and chemical energy accounts as well as an exchange of thermal energy via heating (Q) between the system and surroundings. The balanced chemical equation represents this process symbolically, showing that the atoms in the products are the same as those in the reactants

Note: there are 4 atoms of H and 2 atoms of O on each side of the equation.

Applying the Model

2. Balance the reaction below by drawing any additional reactant and/or product molecules that would be needed.

Write the **balanced equation** for this reaction.

Which of these molecules would be called reactants?

DB₂, CD₂, and BAC are reactants

Cameron, Katalin Hangos, 2001-05-23 Process Modelling and Model Analysis describes the use of models in process engineering Process engineering is all about manufacturing of just about anything To manage processing and manufacturing systematically the engineer has to bring together many different techniques and analyses of the interaction between various aspects of the process For example process engineers would apply models to perform feasibility analyses of novel process designs assess environmental impact and detect potential hazards or accidents To manage complex systems and enable process design the behavior of systems is reduced to simple mathematical forms This book provides a systematic approach to the mathematical development of process models and explains how to analyze those models Additionally there is a comprehensive bibliography for further reading a question and answer section and an accompanying Web site developed by the authors with additional data and exercises Introduces a structured modeling methodology emphasizing the importance of the modeling goal and including key steps such as model verification calibration and validation Focuses on novel and advanced modeling techniques such as discrete hybrid hierarchical and empirical modeling Illustrates the notions tools and techniques of process modeling with examples and advances applications **Software Architectures and Tools for Computer Aided Process Engineering** Bertrand Braunschweig, Rafiqul Gani, 2002-10-30 The idea of editing a book on modern software architectures and tools for CAPE Computer Aided Process Engineering came about when the editors of this volume realized that existing titles relating to CAPE did not include references to the design and development of CAPE software Scientific software is needed to solve CAPE related problems by industry academia for research and development for education and training and much more There are increasing demands for CAPE software to be versatile flexible efficient and reliable This means that the role of software architecture is also gaining increasing importance Software architecture needs to reconcile the objectives of the software the framework defined by the CAPE methods the computational algorithms and the user needs and tools other software that help to develop the CAPE software The object of this book is to bring to the reader the software side of the story with respect to computer aided process engineering Chemistry in the Community, 1995 *Applied Mechanics Reviews*, 1987 **Rainfall-Runoff Modelling** Keith J.
