Endocrine Disorders Case Studies

Name _____ Date _____ Period _____

Directions: Read each case study from what you've learned in class plus research on signs, symptoms, typical causes, and common complications to draw conclusions about a suspected diagnosis.

Case Study #1 (Read notes on day 1)

Present is a 14-month-old male. Measures in last percentile for height. At birth there was rapid bone growth. Mother has history of pituitary gland and breast tumor. Patient takes up to 2 tablets.

What condition do you suspect? Explain your answer using complete sentences and evidence from patient sources (only the name of the source in the space below case).

Case Study #2 (Read notes on day 1)

Patient is a 30-year-old female. Physical complaints are fatigue, tingling arms, and weight weight gain. Patient began her job 12 months ago. States her supervisor significantly more stress than previous jobs. Patient was diagnosed with hypothyroidism 3 months prior and is currently on medication. Patient is being tested for Type 2 Diabetes (A1C) (patient was pregnant).

What condition do you suspect? Explain your answer using complete sentences and evidence from patient sources (only the name of the source in the space below case).

research in mathematical immunology is based on low resolution models a fundamental question is how complex the mathematical models should be To respond to this challenging issue we advocate a hypothesis driven approach to formulate and apply available mathematical modelling technologies for understanding the complexity of the immune system Moreover pure empirical analyses of immune system behavior and the system s response to external perturbations can only produce a static description of the individual components of the immune system and the interactions between them Shifting our view of the immune system from a static schematic perception to a dynamic multi level system is a daunting task It requires the development of appropriate mathematical methodologies for the holistic and quantitative analysis of multi level molecular and cellular networks Their coordinated behavior is dynamically controlled via distributed feedback and feedforward mechanisms which altogether orchestrate immune system functions The molecular regulatory loops inherent to the immune system that mediate cellular behaviors e g exhaustion suppression activation and tuning can be analyzed using mathematical categories such as multi stability switches ultra sensitivity distributed system graph dynamics or hierarchical control GB is supported by the Russian Science Foundation grant 18 11 00171 AM is also supported by grants from the Spanish Ministry of Economy Industry and Competitiveness and FEDER grant no SAF2016 75505 R the Mar a de Maeztu Programme for Units of Excellence in R D MDM 2014 0370 and the Russian Science Foundation grant 18 11 00171 The Role of Exosomes in

INTRODUCTION FOR HEART 3D

BIOPRINTING - BOOK 2 Edenilson Brandl, 2024-05-18 The realm of bioprinting especially 3D bioprinting of complex organs such as the heart is at the forefront of modern medical science This book Introduction to Heart 3D Bioprinting Introduction to Cell Biology and The 3D Bioprinting serves as a comprehensive guide to understanding the intricate relationship between cell biology and the innovative field of 3D bioprinting In the rapidly advancing field of bioprinting the ability to create functional heart tissues and eventually whole organs holds immense promise for addressing the global shortage of donor organs and improving outcomes for patients with severe cardiovascular diseases However this ambition requires a profound understanding of cell biology tissue engineering and the bioprinting technologies that can bring these visions to reality This book is divided into two primary sections The first section delves into the fundamentals of cell biology providing detailed insights into cellular mechanisms structures and processes that are crucial for anyone looking to explore or work in the field of bioprinting Topics such as cytoskeleton regulation cellular respiration DNA replication and stem cell biology are meticulously covered to lay a robust foundation for understanding how cells can be manipulated and utilized in bioprinting applications It explores the techniques materials and technologies used to create three dimensional biological structures This section discusses the integration of cells into bioprinted constructs the challenges of mimicking the complex architecture of the heart and the innovative solutions being developed to overcome these hurdles Together these sections provide a detailed roadmap from the basic principles of cell biology to the cutting edge applications of 3D bioprinting Whether you are a student researcher or practitioner this book aims to equip you with the knowledge and tools necessary to

contribute to the exciting advancements in heart 3D bioprinting I would like to express my gratitude to the countless researchers and pioneers in the fields of cell biology and bioprinting whose work has made this book possible Their dedication to advancing science and medicine inspires us to push the boundaries of what is possible and strive for innovations that can transform lives

General and Comparative Endocrinology A.M. Schreiber,2023-11-24 General and Comparative Endocrinology An Integrative Approach takes a holistic approach to endocrinology introducing students to the diverse facets of this interdisciplinary science ranging from the medical to comparative domains while also exploring evolutionary environmental and conservation specializations within the field The textbook is founded on the principle that students interested in the health sciences will benefit from understanding how proficiency in endocrine function among a diversity of organisms contributes to advances in modern medicine Likewise students intrigued by comparative physiology will benefit from the wealth of knowledge derived from medical clinical endocrinology the historical bedrock of the field This textbook represents the modern field of endocrinology in its totality by addressing topics and recent advances not currently discussed in other introductory endocrinology textbooks Key Features Introduces the broad and interdisciplinary scope of endocrinology Provides clear chapter objectives and key concepts Includes summary and synthesis questions for each chapter that are suitable for exams and quizzes Includes a chapter devoted to endocrine disrupting chemicals Describes the roles played by the endocrine system in important health challenges related to appetite regulation obesity diabetes and other diseases stemming from mismatches to modernity Integrates evolutionary and comparative approaches to hormones and health

G-Protein-Coupled Receptor Dimers Katharine Herrick-Davis,Graeme Milligan,Giuseppe Di Giovanni,2017-08-31 G protein coupled receptors GPCRs are believed to be the largest family of membrane proteins involved in signal transduction and cellular responses They dimerize form a pair of macromolecules with a wide variety of other receptors The proposed book will provide a comprehensive overview of GPCR dimers starting with a

historical perspective and including basic information about the different dimers how they synthesize their signaling properties and the many diverse physiological processes in which they are involved In addition to presenting information about healthy GPCR dimer activity the book will also include a section on their pathology and therapeutic potentials

Military Strategies for Sustainment of Nutrition and Immune Function in the Field Committee on Military Nutrition Research, Institute of Medicine, 1999-05-27 Every aspect of immune function and host defense is dependent upon a proper supply and balance of nutrients Severe malnutrition can cause significant alteration in immune response but even subclinical deficits may be associated with an impaired immune response and an increased risk of infection Infectious diseases have accounted for more off duty days during major wars than combat wounds or nonbattle injuries Combined stressors may reduce the normal ability of soldiers to resist pathogens increase their susceptibility to biological warfare agents and reduce the effectiveness of vaccines intended to protect them There is also a concern with the inappropriate use of dietary supplements This book one of a series examines the impact of various types of stressors and the role of specific dietary nutrients in maintaining immune function of military personnel in the field It reviews the impact of compromised nutrition status on immune function the interaction of health exercise and stress both physical and psychological in immune function and the role of nutritional supplements and newer biotechnology methods reported to enhance immune function The first part of the book contains the committee s workshop summary and evaluation of ongoing research by Army scientists on immune status in special forces troops responses to the Army s questions conclusions and recommendations The rest of the book contains papers contributed by workshop speakers grouped under such broad topics as an introduction to what is known about immune function the assessment of immune function the effect of nutrition and the relation between the many and varied stresses encountered by military personnel and their effect on health
