

Phylum Annelida (Key study organism: Earthworms)

General Features:

Invertebrate - acoelomate (if a vertical body plan, segments to contain coelom - secondary coelom and mesoderm for locomotion, apoda - this part of the body has no legs, segments)

Closed Circulatory System:

Blood confined to heart and blood vessels - ortic arches (5 pairs of hearts), hemoglobin as oxygen transporter - linked to skin

Nervous System:

Simple brain connects to nerve cord - ventral nerve cord extends the length of the body

Reproduction:

Sexual dimorphism - some species are hermaphrodites; others have separate sexes

Copulation - sperm transferred from one individual to other; clitellum - the area of the body where the eggs are laid

Digestive System:

Tubular gut w/ 2 openings - mouth and anus

- oesophagus draws in food
- oesophagus conducts food to crop
- Crop stores food
- Gizzard grinds food
- Intestine absorbs digested nutrients

Modern Biology Study Guide Annelida:

Annelids in Modern Biology Daniel H. Shain, 2009-04-22 Annelids offer a diversity of experimentally accessible features making them a rich experimental subject across the biological sciences including evolutionary development neurosciences and stem cell research This volume introduces the Annelids and their utility in evolutionary developmental biology neurobiology and environmental ecological studies including extreme environments The book demonstrates the variety of fields in which Annelids are already proving to be a useful experimental system Describing the utility of Annelids as a research model this book is an invaluable resource for all researchers in the field *Annelida Basal Groups and*

Pleistoannelida, Sedentaria I Günter Purschke, Markus Böggemann, Andreas Schmidt-Rhaesa, Wilfried Westheide, 2019-03-18 This book is the first in a series of 4 volumes in the Handbook of Zoology series about morphology anatomy reproduction development ecology phylogeny and systematics of Annelida This first volume covers members of the so called basal radiation and the first part of Sedentaria It is supplemented by chapters on the history of annelid research their fossil record and an introduction to the phylogeny of annelids and their position in the tree of life In the latter chapter the history of their systematic is reviewed giving an almost complete picture of systematic scientific progress especially in the past years which changed our view on annelid phylogeny dramatically The most basal annelids lately united as Palaeoannelida represent two families of aberrant polychaetes formerly often suggested to be highly derived which now give us a fresh look on how the ancestral annelid may have looked like These lack certain key characters such as nuchal organs and possess rather simple nervous systems which now likely represent primitive character states In this basal radiation the first taxon of apparently unsegmented and achaetigerous animals is positioned the Sipuncula Most likely another group of platyhelminth like and unsegmented and even chaeta less annelids Lobatocerebridae falls into this basal radiation The section of Sedentaria starts with Orbiniida a taxon characterized by elongated thread like worms which do not have anterior appendages like palps and comprises several families representing members of the Meiofauna These minute worms often inhabiting the interstitial spaces in marine sands are suggested to have evolved by progenesis The second higher taxon is represented by Cirratuliformia comprising nine families of typical sedentary polychaetes each of which showing a remarkable variation of the annelid body plan Members of this taxon usually exhibit many annelid characters but certain also lack the most typical prostomial appendages the palps **Barron's Science 360: A Complete Study Guide to Biology with Online Practice**
