UNEP/GC. United Nations Environment Programme. Governing Council, 1984

Global Environmental Politics Ronnie D. Lipschutz, 2003-07-30 Traditional views of global environmental politics take the structures and relations of international politics as a given Solutions to environmental problems then must be products of concession negotiation and inevitable compromise a world of top down planetary management Lipschutz challenges students to question these conventional approaches He argues that much light can be shed on global environmental degradation if we look beyond the politics of conflict and cooperation and explore environmental problems

from their very roots Using a framework that accounts for the ontologies material conditions and power relations that structure global environmental problems Lipschutz is able to more effectively question attempts to clean up the globe and sustain the world's natural resources Throughout the text the author uses compelling cases to illustrate the effects of globalization and capitalism yet is careful to make the link between the local and the global to show how we as individuals are both consumers of goods and producers of pollution A powerful new approach How is the financing of a water system in Bolivia linked to long standing forestation practices in India Taking nothing for granted the root causes of major global environmental problems are exposed and subjected to rigorous analysis Lipschutz shows for instance how privatization operates in different global contexts with strikingly similar consequences In what ways are liberalism and realism actually two sides of the same coin Both make self interest of the individual and of the state key operating terms In a revealing comparison Lipschutz explores the limits of these dominant political models to effectively frame and solve environmental problems What kinds of political social and environmental practices bring about meaningful change By emphasizing the global impacts of local actions the text shows how attempts to control environmental problems may actually reproduce the very systems they are meant to ameliorate Combined with practical pedagogy Rich historical background helps contextualize contemporary issues Extensive suggested reading lists at the end of each chapter guide students to further research while tables and figures elegantly show data and concepts The emphasis on assessing the root causes of global environmental problems and models encourages critical thinking Students are also encouraged to rethink their own role in the global environmental system and to get involved in effective forms of social change

**Urban Water Trajectories** Sarah Bell, Adriana Allen, Pascale Hofmann, Tse-Hui Teh, 2016-10-22 Water is an essential element in the future of cities It shapes cities locations form ecology prosperity and health The changing nature of urbanisation climate change water scarcity environmental values globalisation and social justice mean that the models of provision of water services and infrastructure that have dominated for the past two centuries are increasingly infeasible Conventional arrangements for understanding and managing water in cities are being subverted by a range of natural technological political economic and social changes The prognosis for water in cities remains unclear and multiple visions and discourses are emerging to fill the space left by the certainty of nineteenth century urban water planning and engineering This book documents a sample of those different trajectories in terms of water transformations option services and politics Water is a key element shaping urban form economies and lifestyles part of the ongoing transformation of cities Cities are faced with a range of technical and policy options for future water systems Water is an essential urban service but models of provision remain highly contested with different visions for ownership of infrastructure the scale of provision and the level of service demanded by users Water is a contentious political issue in the future of cities serving different urban interests as power and water seem to flow in the same direction Cities in Africa Asia Australia Europe and South America provide case studies and emerging water challenges

and responses Comparison across different contexts demonstrates how the particular and the universal intersect in complex ways to generate new trajectories for urban water
