Struggling to Make the Grade: A Review of the Causes and Consequences of the Weak Outcomes of South Africa's Education System Mr. Montfort Mlachila, Tlhalafang Moeletsi, 2019-03-01 While South Africa has made significant improvements in basic and tertiary education enrollment the country still suffers from significant challenges in the

quality of educational achievement by almost any international metric The paper finds that money is clearly not the main issue since the South Africa s education budget is comparable to OECD countries as a percent of GDP and exceeds that of most peer sub Saharan African countries in per capita terms The main explanatory factors are complex and multifaceted and are associated with insufficient subject knowledge of some teachers history race language geographic location and socio economic status Low educational achievement contributes to low productivity growth and high levels of poverty unemployment and inequality Drawing on the literature the paper sketches some policy considerations to guide the debate on what works and what does not

Naked Money: A Revealing Look at Our Financial System Charles

Wheelan,2016-04-04 Charles Wheelan s wonderfully whimsical best selling Naked series tackles the weird surprisingly colorful world of money and banking Consider the 20 bill It has no more value as a simple slip of paper than Monopoly money Yet even children recognize that tearing one into small pieces is an act of inconceivable stupidity What makes a 20 bill actually worth twenty dollars In the third volume of his best selling Naked series Charles Wheelan uses this seemingly simple question to open the door to the surprisingly colorful world of money and banking The search for an answer triggers countless other questions along the way Why does paper money fiat currency if you want to be fancy even exist And why do some nations like Zimbabwe in the 1990s print so much of it that it becomes more valuable as toilet paper than as currency How do central banks use the power of money creation to stop financial crises Why does most of Europe share a common currency and why has that arrangement caused so much trouble And will payment apps bitcoin or other new technologies render all of this moot In Naked Money Wheelan tackles all of the above and more showing us how our banking and monetary systems should work in ideal situations and revealing the havoc and suffering caused in real situations by inflation deflation illiquidity and other monetary effects Throughout Wheelan s uniquely bright eyed whimsical style brings levity and clarity to a subject often devoid of both With illuminating stories from Argentina Zimbabwe North Korea America China and elsewhere around the globe Wheelan demystifies the curious world behind the paper in our wallets and the digits in our bank accounts

The Normal Accident Theory of Education Andrew K. Milton,2014-04-01 Much of the current debate about

education too often resembles the blind men describing an elephant apprehending only a particular part of the situation or the process many analysts tell an evocative but incomplete story The so called reform discussion proceeds with a lack of depth about the nuances and realistic limitations in the institutional order of school This book argues that as regulation of schools moves further up the bureaucratic hierarchy first to state departments of education then to the national department of education the legal and institutional requirements get more intensive but less concretely useful in class rooms This bureaucratization serves to tighten the organizational environment thereby increasing the risk of normal accidents The increasing governmental management in other words makes it more likely that schools will fail to meet their goals Analyses of education are too often developed for public consumption in a fast moving political world This book examines some of the

deeper organizational reasons why things don't work so well in school as well as a look at some of things that do work. Most importantly, the book will explain how the social and cultural expectations of what schools can do may create unrealistic hopes. We as a society and schools as institutions embrace these unreasonably high hopes at our collective peril. Credit Rating Governance Ahmed Naciri, 2015-01-30 Credit rating agencies play an essential role in the modern financial system and are relied on by creditors and investors on the market. In the recent financial crisis, their power and reliability were often questioned yet a simple rating downgrade could threaten to bankrupt a whole country. This book examines the governance of credit rating agencies as expressed by their ability to fairly, ethically, and consistently assign higher rates to issuers having lesser default risks. However, factors such as the drive for increased revenue and market share, the inadequate business model, the inadequate methodology of assessing risk, opacity, and inadequate internal monitoring have all been identified as critical governance failures for credit agencies. This book explores these issues and proposes some potential solutions and improvements. This will be of interest to researchers and advanced students of corporate finance, financial economics, risk management, investment management, and banking.

Food and Cooking Skills Education Anita Tull, 2018-01-29 Food and Cooking Skills Education (FCSE) is a complex mix of policy and practicality, educational theory and pedagogy, classroom and government policy. This book shows how FCSE has been at the centre of a tussle between education and policy for decades. It reviews how FCSE has grappled with various significant issues of concern that threaten to marginalise it and pose problems for educational practicalities as expectations are increased but resources are squeezed. It assesses the debate about the significance and importance of acquiring practical food and cooking skills in a society where the purchase of ready-made food has become commonplace and public knowledge of where our food comes from is noticeably lacking. This has contributed to the escalating incidence of diet-related diseases and the attendant cost to society and threatened environmental sustainability. In turn, governments have reacted by proposals to make practical cooking skills a statutory National Curriculum subject as part of the armoury for tackling such costs. Based on detailed research conducted across England and Wales as well as comparisons with thirty-five other countries or states, the author makes recommendations for policy to manage this challenge facing contemporary society.

Business, Organized Labour and Climate Policy Peter Glynn, Timothy Cadman, Tek Narayan Maraseni, 2017-04-28 This impartial study analyses the role of employer's organisations and trade unions in climate change policy and its impacts on the labour market. The policies of government to manage greenhouse gas emissions will require business to change its product and service delivery arrangements which in turn means labour requirements will also change. The book also considers whether labour market issues should be explicit in the theoretical framework of ecological modernisation as it guides the policy development process.

Randomized Control Trials in the

Field of Development Florent Bédécarrats, Isabelle Guérin, François Roubaud, 2020-09-17 In October 2019 Abhijit Banerjee Esther Duflo and Michael Kremer jointly won the 51st Sveriges Riksbank Prize in Economic Sciences in Memory of Alfred Nobel for their experimental approach to alleviating global poverty But what is the exact scope of their experimental method known as randomized control trials RCTs Which sorts of questions are RCTs able to address and which do they fail to answer The first of its kind Randomized Control Trials in the Field of Development A Critical Perspective provides answers to these questions explaining how RCTs work what they can achieve why they sometimes fail how they can be improved and why other methods are both useful and necessary Bringing together leading specialists in the field from a range of backgrounds and disciplines economics econometrics mathematics statistics political economy socioeconomics anthropology philosophy global health epidemiology and medicine it presents a full and coherent picture of the main strengths and weaknesses of RCTs in the field of development Looking beyond the epistemological political and ethical differences underlying many of the disagreements surrounding RCTs it explores the implementation of RCTs on the ground outside of their ideal theoretical conditions and reveals some unsuspected uses and effects their disruptive potential but also their political uses The contributions uncover the implicit worldview that many RCTs draw on and disseminate and probe the gap between the method's narrow scope and its success while also proposing improvements and alternatives Without disputing the contribution of RCTs to scientific knowledge Randomized Control Trials in the Field of Development warns against the potential dangers of their excessive use arguing that the best use for RCTs is not necessarily that which immediately springs to mind Written in plain language this book offers experts and laypeople alike a unique opportunity to come to an informed and reasoned judgement on RCTs and what they can bring to development *Rethinking Value-Added Models in Education* Audrey Amrein-Beardsley, 2014-04-24 Since passage of the No Child Left Behind Act in 2001 academic researchers econometricians and statisticians have been exploring various analytical methods of documenting students' academic progress over time Known as value added models VAMs these methods are meant to measure the value a teacher or school adds to student learning from one year to the next To date however there is very little evidence to support the trustworthiness of these models What is becoming increasingly evident yet often ignored mainly by policymakers is that VAMs are 1 unreliable 2 invalid 3 nontransparent 4 unfair 5 fraught with measurement errors and 6 being inappropriately used to make consequential decisions regarding such things as teacher pay retention and termination Unfortunately their unintended consequences are not fully recognized at this point either Given such the timeliness of this well researched and thoughtful book cannot be overstated This book sheds important light on the debate surrounding VAMs and thereby offers states and practitioners a highly important resource from which they can move forward in more research based ways

conscientiousness and most personality traits were largely fixed by early childhood What researchers have now discovered is that virtually all of these qualities continue to change through early adulthood and often well beyond Such findings suggest that educators may be able to do much more than was previously thought possible to teach students to develop these important characteristics and thereby enable them to flourish in later life How prepared are educators to cultivate these qualities of mind and behavior What do they need to learn to capitalize on the possibilities Will college faculties embrace these opportunities and make the necessary changes in their curricula and teaching methods What can be done to hasten the process of innovation and application In providing answers to these questions Bok identifies the hurdles to institutional change proposes sensible reforms and demonstrates how our colleges can help students lead more successful productive and meaningful lives
