Frischmann, 2013-01-01 Infrastructure resources are the subject of many contentious public policy debates including what to do about crumbling roads and bridges whether and how to protect our natural environment energy policy even patent law reform universal health care network neutrality regulation and the future of the Internet Each of these involves a battle to control infrastructure resources to establish the terms and conditions under which the public receives access and to determine how the infrastructure and various dependent systems evolve over time *Infrastructure The Social Value of Shared Resources* devotes much needed attention to understanding how society benefits from infrastructure resources and how management decisions affect a wide variety of interests The book links infrastructure a particular set of resources defined in terms of the manner in which they create value with commons a resource management principle by which a resource is shared within a community The infrastructure commons ideas have broad implications for scholarship and public policy across many fields ranging from traditional infrastructure like roads to environmental economics to intellectual property to Internet policy Economics has become the methodology of choice for many scholars and policymakers in these areas The book offers a rigorous economic challenge to the prevailing wisdom which focuses primarily on problems associated with ensuring adequate supply The author explores a set of questions that once asked seem obvious what drives the demand side of the equation and how should demand side drivers affect public policy Demand for infrastructure resources involves a range of important considerations that bear on the optimal design of a regime for infrastructure management The book identifies resource valuation and attendant management problems that recur across many different fields and many different resource types and it develops a functional economic approach to understanding and analyzing these problems and potential solutions **Competing Against Time** George Stalk, 1990-03-01 Today time is the cutting edge In fact as a strategic weapon contend George Stalk Jr and Thomas M Hout time is the equivalent of money productivity quality even innovation In this path breaking book based upon ten years of research the authors argue that the ways leading companies manage time in production in new product development and in sales and distribution represent the most powerful new sources of competitive advantage With many detailed examples from companies that have put time based strategies in place such as Federal Express Ford Milliken Honda Deere Toyota Sun Microsystems Wal Mart Citicorp Harley Davidson and Mitsubishi the authors

describe exactly how reducing elapsed time can make the critical difference between success and failure Give customers what they want when they want it or the competition will Time based companies are offering greater varieties of products and services at lower costs and with quicker delivery times than their more pedestrian competitors Moreover the authors show that by refocusing their organizations on responsiveness companies are discovering that long held assumptions about the behavior of costs and customers are not true Costs do not increase when lead times are reduced they decline Costs do not increase with greater investment in quality they decrease Costs do not go up when product variety is increased and response time is decreased they go down And contrary to a commonly held belief that customer demand would be only marginally improved by expanded product choice and better responsiveness the authors show that the actual results have been an explosion in the demand for the product or service of a time sensitive competitor in most cases catapulting it into the most profitable segments of its markets With persuasive evidence Stalk and Hout document that time consumption like cost is quantifiable and therefore manageable Today s new generation companies recognize time as the fourth dimension of competitiveness and as a result operate with flexible manufacturing and rapid response systems and place extraordinary emphasis on R D and innovation Factories are close to the customers they serve Organizations are structured to produce fast responses rather than low costs and control Companies concentrate on reducing if not eliminating delays and using their response advantage to attract the most profitable customers Stalk and Hout conclude that virtually all businesses can use time as a competitive weapon In industry after industry they illustrate the processes involved in becoming a time based competitor and the ways managers can open and sustain a significant advantage over the competition
