

PRODUCT INFORMATION

With this VTEC controller you can freely change the shifting point of any variable valve timing fixed high cam (1000-5000rpm), making it possible to change the settings to meet your needs at low torque or at peak power. You can change your air/fuel ratio depending on your driving style. The factory variable valve timing kick-in point is about 4-5000rpm. The problem is that no motor runs exactly the same, so that particular kick point doesn't work best for every motor. If variable valve timing kicks-in too soon, your motor bogs down slightly when it kicks in, and the motor has to recover before taking advantage of the variable valve timing controller resulting in a loss of power. If variable valve timing kicks-in too late, the engine will sit on the low rpm cam past its power peak, resulting in wasted power. This variable valve timing controller finds the power being wasted by the computer and uses it.
