**Examining Climate Change and the Media** United States. Congress. Senate. Committee on Environment and Public Works,2009 A Grand Strategy for America Robert J. Art,2013-02-15 The United States today is the most powerful nation in the world perhaps even stronger than Rome was during its heyday It is likely to remain the world s preeminent power for at least several decades to come What behavior is appropriate for such a powerful state To answer this question Robert J Art concentrates on grand strategy the deployment of military power in both peace and war to support foreign policy goals He first defines America s contemporary national interests and the specific threats they face then identifies seven grand strategies that the United States might contemplate examining each in relation to America s interests The seven are dominion forcibly trying to remake the world in America s own image global collective security attempting to keep the peace everywhere regional collective security confining peacekeeping efforts to Europe cooperative security seeking to reduce the occurrence of war by limiting other states offensive capabilities isolationism withdrawing from all military involvement beyond U S borders containment holding the line against aggressor states and selective engagement choosing to prevent or to become involved only in those conflicts that pose a threat to the country s long term interests Art makes a strong case for selective engagement as the most desirable strategy for contemporary America It is the one that seeks to forestall dangers not simply react to them that is politically viable at home and abroad and that protects all U S interests both essential and desirable Art concludes that selective engagement is not a strategy for all times but it is the best grand strategy for these times

**The Presidents and the Planet** Jay Hakes,2024-08-05 The Presidents and the Planet recounts the story of the world s greatest environmental dilemma through the eyes of early climate change pioneers It begins in the 1950s when American scientists first warned about the risks of pollution altering the natural climate in dramatic ways the national media began covering the matter and experts first offered testimony to congressional committees on the topic The story ends in the early 1990s by which time global efforts to confront the challenge were advancing while political turmoil had begun to undermine U S leadership s ability to address current and future environmental threats While some early proponents endorsing climate action are well known many of the major players have gone largely unrecognized The oceanographer Roger Revelle exerted influence on eight White Houses during his life and even one after his death when his former student

Al Gore assumed the office of vice president William Nordhaus had already written seminal studies on climate change when President Jimmy Carter appointed him to the Council of Economic Advisors Four decades later the Yale professor won the Nobel Prize in economics for his work on the subject John Chafee a Republican from Rhode Island chaired the Senate's first committee on the problem and provided concrete solutions to face the dangers of a warming planet during the Reagan administration The drama reached a full pitch during the George H W Bush years as vocal advocates for climate action and staunch foes of government regulation wrestled over the direction of U S energy and environmental policy To better trace the evolving climate debate in America author Jay Hakes inspected the archives and writings of prominent scientists and the pivotal reports of the National Academy of Sciences and traveled to presidential libraries to discover how commanders in chief and their science economic and political advisors addressed the issue The Presidents and the Planet affords fresh perspectives that will alter the public's understanding of when officials first grasped the dire consequences of climate change
