Chapter 1: Introduction

1.1 Introduction

The library management system is all about organizing, managing the library, and library-oriented tasks. It also involves maintaining the database of entering new books and the record of books that have been retrieved or issued, with their respective dates. The purpose of a library management system is to operate a library with efficiency and at reduced costs. The activities of book purchasing, cataloging, indexing, circulation recording and stock checking are done by the software. Such software eliminates the need for repetitive manual work and minimizes the chances of errors. The system saves time for both the user and the librarian. The user can search for the books available in the library. Adding, removing or editing the database is a simple process. Adding new members or cancelling existing memberships can be done with ease.

The project is totally built at administrative end and thus only the administrator is guaranteed the access.

1.2 Objectives

The main objective of the Library Management System is to:

- Manage all the information about Books, Librarian, and Students.
- Developed a well-organized library borrowing system.
- Produced a well-designed and functioning system in accordance to the needs and wants of the borrowers.
- Minimized the task and the effort being performed by both the librarian and borrowers.

1.3 Scope and Limitation

The scope of Online Library Management System includes:

- Provide the list of books the users can borrow.
- A status page for all users to view books borrowed by them, their individual due dates and their individual penalties if any.
- Provide method for adjusting account settings such as passwords, profile.

The Limitation of Online Library Management System includes:

- The proponents intend to develop will not handle online reservation of books.
- The system will not handle payments due to penalty whether the book is damage or lost because a payment of penalty is done on the librarian's office.
