,1992    *Transportation Decision Making* Kumares C. Sinha, Samuel Labi,2011-09-09 This pioneering text provides a holistic approach to decisionmaking in transportation project development and programming which can help transportation professionals to optimize their investment choices The authors present a proven set of methodologies for evaluating transportation projects that ensures that all costs and impacts are taken into consideration The text's logical organization gets readers started with a solid foundation in basic principles and then progressively builds on that foundation Topics covered include Developing performance measures for evaluation estimating travel demand and costing transportation projects Performing an economic efficiency evaluation that accounts for such factors as travel time safety and vehicle operating costs Evaluating a project's impact on economic development and landuse as well as its impact on society and culture Assessing a project's environmental impact including air quality noise ecology water resources and aesthetics Evaluating alternative projects on the basis of multiple performance criteria Programming transportation investments so that resources can be optimally allocated to meet facility specific and system wide goals Each chapter begins with basic definitions and concepts followed by a methodology for impact assessment Relevant legislation is discussed and available software for performing evaluations is presented At the end of each chapter readers are provided resources for detailed investigation of particular topics These include Internet sites and publications of international and domestic agencies and research institutions The authors also provide a companion Web site that offers updates data for analysis and case histories of project evaluation and decisionmaking Given that billions of dollars are spent each year on transportation systems in the United States alone and that there is a need for thorough and rational evaluation and decision making for cost effective system preservation and

improvement this text should be on the desks of all transportation planners engineers and educators With exercises in every chapter this text is an ideal coursebook for the subject of transportation systems analysis and evaluation Feasibility Report and Environmental Impact Statement United States. ### **Clear Zone** T. H. Maze,Neal Hawkins,Christian Sax,2008

In urban communities there are often limited amounts of right of way available for establishing a large setback distance from the curb for fixed objects Urban communities must constantly weigh the cost of purchasing additional right of way for clear zones against the risk of fixed object crashes From 2004 to 2006 this type of crash on curbed roads represented 15% of all fatal crashes and 3% of all crashes in the state of Iowa Many states have kept the current minimum AASHTO recommendations as their minimum clear zone standards however other states have decided that these recommendations are insufficient and have increased the required minimum clear zone distance to better suit the judgment of local designers This report presents research on the effects of the clear zone on urban curbed streets The research was conducted in two phases The first phase involved a synthesis of practice that included a literature review and a survey of practices in jurisdictions that have developmental and historical patterns similar to those of Iowa The second phase involved investigating the benefits of a 10 ft clear zone which included examining urban corridors in Iowa that meet or do not meet the 10 ft clear zone goal The results of this study indicate that a consistent fixed object offset results in a reduction in the number of fixed object crashes a 5 ft clear zone is most effective when the goal is to minimize the number of fixed object crashes and a 3 ft clear zone is most

effective when the goal is to minimize the cost of fixed object crashes

**Design Exception Practices** John Michael Mason, Kevin M. Mahoney, National Cooperative Highway Research Program, 2003 This report describes the range of design exception practices among state transportation agencies STAs and discusses the problems and suggested improvements based on the experience of state agency personnel All STAs are required to comply with the same federal regulation pertaining to design exceptions However the number of design exceptions the circumstances under which they are prepared and the methods employed vary considerably with many factors contributing to this wide range of practice This synthesis characterizes 1 conditions that require a design exception 2 data collection and analysis techniques and 3 internal STA and external rules The report also describes benefits and problems experienced by STAs and identifies suggestions for improving and streamlining the design exception process In addition the innovative practices of two states New Jersey and Wisconsin are identified and discussed
