Actual Causality Joseph Y. Halpern,2019-02-19 A new approach for defining causality and such related notions as degree of responsibility degrees of blame and causal explanation Causality plays a central role in the way people structure the world we constantly seek causal explanations for our observations But what does it even mean that an event C actually caused event E The problem of defining actual causation goes beyond mere philosophical speculation For example in many legal arguments it is precisely what needs to be established in order to determine responsibility The philosophy literature has been struggling with the problem of defining causality since Hume In this book Joseph Halpern explores actual causality and such related notions as degree of responsibility degree of blame and causal explanation The goal is to arrive at a definition of causality that matches our natural language usage and is helpful for example to a jury deciding a legal case a programmer looking for the line of code that cause some software to fail or an economist trying to determine whether austerity caused a subsequent depression Halpern applies and expands an approach to causality that he and Judea Pearl developed based on structural equations He carefully formulates a definition of causality and building on this defines degree of responsibility degree of blame and causal explanation He concludes by discussing how these ideas can be applied to such practical problems as accountability and program verification Technical details are generally confined to the final section of each chapter and can be skipped by non mathematical readers     **Nuclear Science Abstracts** ,1975 NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976 pre dating the prestigious INIS database which began in 1970 NSA existed as a printed product Volumes 1 33 initially created by DOE s predecessor the U S Atomic Energy Commission AEC NSA includes citations to scientific and technical reports from the AEC the U S Energy Research and Development Administration and its contractors plus other agencies and international organizations universities and industrial and research organizations References to books conference proceedings papers patents dissertations engineering drawings and journal articles from worldwide sources are also included Abstracts and full text are provided if available
