Sex, Gender, Ethics and the Darwinian Evolution of Mankind Michel Veuille,2024-06-28 Sex Gender Ethics and the Darwinian Evolution of Mankind examines the impact of Darwin s Descent of Man on contemporary biology and the humanities Its publication in 1871 was a founding event in anthropology Its content was primarily concerned with the development of sexual life social life and intellectual life not only as outcomes of evolution but as components that have actively intermixed over time with the evolutionary mechanism of natural selection The stamp of Darwinism on modern thought is still very important and brings novelties to academic studies Several fields influenced by Darwinian anthropology developed in recent decades including evolutionary ethics the evolution of sociality and sexual communication in animal and plant species Sociobiology and

evolutionary psychology are topics that draw heavily on Darwin's *Descent of Man*. The understanding of Darwin's thought has also progressed greatly in recent decades following the systematic study of Darwin's correspondence and notebooks leading to a reassessment of the development of his thought on humans, social groups and heredity and how they come together in his theory of evolution. The book combines a historical perspective on Darwin's achievement and his legacy. It will be of interest to students and scholars in a variety of fields from experimental biology to the social and historical sciences.

Complexity and Evolution David S. Wilson, Alan Kirman, 2016-09-23 An exploration of how approaches that draw on evolutionary theory and complexity science can advance our understanding of economics. Two widely heralded yet contested approaches to economics have emerged in recent years: one emphasizes evolutionary theory in terms of individuals and institutions; the other views economies as complex adaptive systems. In this book leading scholars examine these two bodies of theory, exploring their possible impact on economics. Relevant concepts from evolutionary theory drawn on by the contributors include the distinction between proximate and ultimate causation, multilevel selection, cultural change as an evolutionary process, and human psychology as a product of gene-culture coevolution. Applicable ideas from complexity theory include self-organization, fractals, chaos theory, sensitive dependence, basins of attraction, and path dependence. The contributors discuss a synthesis of complexity and evolutionary approaches and the challenges that emerge. Focusing on evolutionary behavioral economics and the evolution of institutions, they offer practical applications and point to avenues for future research. Wilson, 1999 This classic by the distinguished Harvard entomologist tells how life on earth evolved and became diverse and now how diversity and life are endangered by us. Truly, while Wilson contributed a great deal to environmental ethics by calling for the preservation of whole ecosystems rather than individual species, his environmentalism appears too anthropocentric. We should judge every scrap of biodiversity as priceless while we learn to use it and come to understand what it means to humanity. And signals abound that the loss of life's diversity endangers not just the body but the spirit. This reprint of the 1992 Belknap Press publication contains a new foreword.
