Etfе Technology And Design:

ETFE Annette LeCuyer, 2008-06-06 ETFE foil has recently become an important material for the cladding of technologically sophisticated and innovative buildings. This material is very thin and lightweight and when used in air-filled cushion assemblies has enormous strength and a range of adaptive environmental attributes. ETFE cushion enclosures became known primarily through Grimshaw Architects Eden Project and Herzog de Meuron's Allianz Arena and they are being used on the spectacular swimming stadium for the 2008 Olympic Games in Beijing, the largest ETFE building envelope in the world so far. This book is conceived as an in-depth introduction to the characteristics of ETFE and its applications in construction. Project examples explore in detail the specific characteristics of ETFE building skins in the areas of structural behavior, light transmission, insulation, acoustics, fire engineering, and environmental modification. *Sustainable Ecological Engineering Design* Mohammad Dastbaz, Chris Gorse, 2016-05-19 This book focuses on the impacts of the built environment and how to predict and measure the benefits and consequences of changes taking place to address sustainability in the development and building industries. It draws together the best treatments of these subjects from the Leeds Sustainability Institute's inaugural International Conference on Sustainability Ecology Engineering Design for Society SEEDS. The focus of discussion is on understanding how buildings and spaces are designed and nurtured to obtain optimal outcomes in energy efficiency and environmental impacts. In addition to examining technical issues such as modeling energy performance, emphasis is placed on the health and well-being of occupants. This holistic approach addresses the interdependence of people with the built and natural environments. The book's contents reflect the interdisciplinary and international collaboration critical to assembly of the knowledge required for positive change. *Construction Manual for Polymers + Membranes* Jan Knippers, Jan Cremers, Markus Gabler, Julian Lienhard, 2012-12-17 Whether it be as translucent sheets broadly stretched, membranes and inflated foil cushions, or in graceful organic curves, architecture today is utilizing plastics in the most disparate forms and for a wide variety of purposes. Innovative technical developments are constantly improving its material properties; at the same time, there is a growing new awareness of its potential as a construction material. While plastics used to be employed primarily as an inexpensive variant on traditional building materials, they are increasingly regarded in the construction world today as a serious and viable alternative, be it as supporting structures, roofs, facades, or elements of interior design and decoration. Thanks in large part to this inherent self-sufficiency, plastics are currently enjoying an unprecedented surge in popularity, even among the international architectural avant-garde, as multiwall sheets or corrugated fiber-reinforced panels, or as filling between glass panes. And the new generation of ecological bioplastics also pays tribute to the debate on sustainability, ridding plastics of their lingering reputation as environmental offenders. From the history of plastics and membranes in architecture to their material properties and requirements in construction and design, the *Plastics and Membranes Construction Manual* cuts to the chase, providing the kind of solid and comprehensive overview of the

subject that readers have come to expect from the Im DETAIL series Selected project examples round off the reference work and make it indispensable for the day to day life of the professional planner and for every architecture library

Nearly Zero Energy Building Refurbishment Fernando Pacheco Torgal, Marina Mistretta, Artūras Kaklauskas, Claes G. Granqvist, Luisa F. Cabeza, 2013-10-22 The recast of the Energy Performance of Buildings Directive EPBD was adopted by the European Parliament and the Council of the European Union on 19 May 2010 For new buildings the recast fixes 2020 as the deadline for all new buildings to be nearly zero energy and even sooner for public buildings by the end of 2018 This book gives practitioner an important tool to tackle the challenges of building refurbishment towards nearly zero energy This book is welcome at this time and sets the scene for professionals whether practitioners or researchers to learn more about how we can make whether old or new buildings more efficient and effective in terms of energy performance

Modern North Julie Decker, 2010-03-31 The Geographic Region Around the North Pole is a Raw and Exotic Area of Untouched Nature and Inescapable Beauty Building in this extremely cold climate requires an advanced degree of ingenuity and resolve Ecological conditions including high winds snowdrifts and permafrost combined with periods of little sunlight present seemingly impossible logistical hurdles for architects Vernacular buildings have emerged but like most indigenous structures they do little more than simply enclose and protect Recent years have witnessed an explosion of exceptional new architecture and a new definition of a Northern building one that is both extraordinarily responsive to place and aesthetically provocative In Modern North Architecture on the Frozen Edge author Julie Decker presents thirty four of the most compelling and far ranging possibilities of contemporary architecture in the North These buildings located in northern Canada Scandinavia and Alaska are united in the way they embrace extreme conditions and provide visual stimulation in places that sometimes offer little more than a whitescape The book contains innovative structures by both established and up and coming architects including David Chipperfield Architects Studio Granda and Shim Sutcliffe Architects as well as essays by Brian Carter Juhani Pallasmaa Edwin Crittenden and Lisa Rochon that place the projects in the context of a new architectural response to the North

BOOK JACKET **Heating with Wolves,**

Cooling with Cacti Negin Imani, Brenda Vale, 2022-01-27 This book describes the detailed process behind the development of a comprehensive thermo bio architectural framework the ThBA This framework systematically connects the thermal performance requirements of a building to relevant solutions found in the natural world This is the first time that architecture has been connected to biology in this manner The book provides an in depth understanding of thermoregulatory strategies in animals and plants and links these to equivalent solutions in architectural design The inclusion of this fundamental knowledge along with the systematic process of accessing it should open up new avenues for the generation of energy efficient and sustainable buildings The Ecologies of the Building Envelope Alejandro Zaera-Polo, Jeffrey

Anderson, 2021-05-11 The Ecologies of the Envelope theorizes the building envelope as a literal embodiment of the social political technological and economic contingencies which have become embedded within it over the last century analyzing the historical lineages heroes and villains that helped define the complex material ecologies we see within the envelope today While the facade is one of the most thoroughly theorized elements of architecture it is also one of the most questioned since the end of the 19th century Within the discipline of architecture the traditional understanding of the facade focuses primarily on semiotic and compositional operations such as proportional laws and linguistic codes which are deployed on the building's surface In contrast to this our material and environmental theory of the envelope proposes that the exponential development of building technologies since the mid 19th century coupled with new techniques of management and regulation have diminished the compositional and ornamental capacities of the envelope in favor of material quantitative and technical performances Rather than producing a stylistic analysis of the facade we investigate the historical lineages of the performances components assembly types and material entanglements that constitute the contemporary building envelope

Terraforming Mars Martin Beech, Joseph Seckbach, Richard Gordon, 2021-12-09 TERRAFORMING MARS This book provides a thorough scientific review of how Mars might eventually be colonized industrialized and transformed into a world better suited to human habitation The idea of terraforming Mars has in recent times become a topic of intense scientific interest and great public debate Stimulated in part by the contemporary imperative to begin geoengineering Earth as a means to combat global climate change the terraforming of Mars will work to make its presently hostile environment more suitable to life especially human life Geoengineering and terraforming at their core have the same goal that is to enhance or revive the ability of a specific environment to support human life society and industry The chapters in this text written by experts in their respective fields are accordingly in resonance with the important and ongoing discussions concerning the human stewardship of global climate systems In this sense the text is both timely and relevant and will cover issues relating to topics that will only grow in their relevance in future decades The notion of terraforming Mars is not a new one as such and it has long played as the background narrative in many science fiction novels This book however deals exclusively with what is physically possible and what might conceivably be put into actual practice within the next several human generations
