*Adult Stem Cell Niches* Sabine Wislet, 2014-08-01 Tissue specific stem cells have the capacity to self renew and differentiate into several types of functional cells that replenish lost cells throughout an organism's lifetime Studies on stem cells from diverse systems have shown that stem cell function is controlled by extracellular cues from the niche and by intrinsic genetic programs within the stem cell The objectives of this book would be to review the molecular mechanisms that mediate the balanced response of stem cells to the needs of the organisms Likewise niches have also been linked to pathologies by imposing aberrant function on stem cells or other targets Therefore the second objective of this book would be to highlight the molecular dysregulation of niche biology leading to the disease The third objective would be to review the therapeutic targets described within stem cell niches
