Rekart,2013-08-15 The Cognitive Classroom describes how cutting edge and classic research findings from the fields of brain science and cognitive psychology may be applied to classroom teaching Using the perspective and expertise of an educational researcher originally trained as a neuroscientist research findings and theories are translated into practical strategies The jargon so often found in research journals and technical reports is discarded here as studies are presented in an engaging manner that any educated individual can easily follow Specifically the book describes how research on perception attention learning memory language reasoning and problem solving may be used to achieve the type of deep learning sought after by teachers What s more this book discusses recent findings showing how the brains and cognitive processes of today s students have been impacted by technology and proposes actions that educators can take to optimize teaching in a digital world Visual language Wendy Sandler,Marianne Gullberg,Carol Padden,2019-11-04 Traditionally research on human language has taken speech and written language as the only domains of investigation However there is now a wealth of empirical studies documenting visual aspects of language ranging from rich studies of sign languages which are self contained visual language systems to the field of gesture studies which examines speech associated gestures facial expressions and other bodily movements related to communicative expressions But despite this large body of work sign language and gestures are rarely treated together in theoretical discussions This volume aims to remedy that by considering both types of visual language jointly in order to transcend artificial theoretical divides and to arrive at a comprehensive account of the human language faculty This collection seeks to pave the way for an inherently multimodal view of language in which visible actions of the body play a crucial role The 19 papers in this volume address four broad and overlapping topics 1 the multimodal nature of language 2

multimodal representation of meaning 3 multimodal and multichannel prosody and 4 acquisition and development of visual language in children and adults
