

A Use Case Storyboard Example

- Suppose you want to elaborate a section of a use case that would describe how a user inserts graphic clip art from an online source into a document. Perhaps the sequence of events appears as follows.

Use Case Sequence: Inserting Online Clip Art

(This series of steps within a larger use case allows the user to access an online clip art repository and select and insert a new clip art item.)

1. The user puts the cursor at the desired clip art location and selects the function for inserting clip art.
2. The system displays the clip art source locations.
3. The user selects the "Clips Online" choice.
4. The system launches the browser and automatically navigates to the online library
5. The user navigates to the selected art item.

Rapid Integration of Software Engineering Techniques Nicolas Guelfi, 2005-05-11 This book constitutes the thoroughly refereed postproceedings of the First International Workshop on Rapid Integration of Software Engineering Techniques RISE 2004 held in Luxembourg Kirchberg Luxembourg in November 2004 The 12 revised full papers presented together with an invited paper went through two rounds of reviewing and improvement and were selected from 28 initial submissions Among the topics addressed are software architecture software process component driven design dynamic service verification model checking model based testing exception handling metamodeling UML state machines and model centric development

Use Case Modeling Kurt Bittner, Ian Spence, 2003 Discusses how to define and organize use cases that model the user requirements of a software application The approach focuses on identifying all the parties who will be using the system then writing detailed use case descriptions and structuring the use case model An ATM example runs throughout the book The authors work at Rational Software Annotation copyrighted by Book News Inc Portland OR *Modern Integrated Technology of Information Systems Design and Development* Emaid Abdul-Retha Victor Illushko, Alexander Sokolov Irena Zaretskaya Soenke Dierks Pascual Marques, 2016-07-01 The main purpose of this monograph is to introduce the up to date technology of software development for different applied problems solution as one of the most important spheres of modern engineering activity It is absolutely obvious today that the role of information technology in everyday engineering activity rises steeply Moreover the efficient skills in information technology form the obligatory and essential part of the qualification requirements to modern engineer **Human-Centered Software Engineering - Integrating Usability in the Software**

Development Lifecycle Ahmed Seffah, Jan Gulliksen, Michel C. Desmarais, 2006-06-26 Human Centered Software Engineering Bridging HCI Usability and Software Engineering From its beginning in the 1980 s the field of human computer interaction HCI has been a multidisciplinary arena By this I mean that there has been an explicit recognition that distinct skills and perspectives are required to make the whole effort of designing usable computer systems work well Thus people with backgrounds in Computer Science CS and Software Engineering SE joined with people with backgrounds in various behavioral science disciplines e g cognitive and social psychology anthropology in an effort where all perspectives were seen as essential to creating usable systems But while the field of HCI brings individuals with many background disciplines together to discuss a common goal the development of useful usable satisfying systems the form of the collaboration remains unclear Are we striving to coordinate the varied activities in system development or are we seeking a richer collaborative framework In coordination Usability and SE skills can remain quite distinct and while the activities of each group might be critical to the success of a project we need only insure that critical results are provided at appropriate points in the development cycle Communication by one group to the other during an activity might be seen as only minimally necessary In collaboration there is a sense that each group can learn something about its own methods and

processes through a close partnership with the other Communication during the process of gathering information from target users of a system by usability professionals would not be seen as something that gets in the way of the essential work of software engineering professionals

COTS-Based Software Systems John Dean, Andree Gravel, 2003-06-30 Modern software systems increasingly use commercial off the shelf COTS software products as building blocks In some cases major software systems are assembled with virtually no custom code in the system The use of COTS software products as components offers the promise of rapid delivery to end users shared development costs with other customers and an opportunity for expanding mission or business capabilities and performance as improvements are made in the commercial marketplace Few organizations today can afford the resources and time to replicate market tested capabilities Yet the promise of COTS products is too often not realized in practice There have been more failures than successes in using COTS software products The research and software practitioner communities have been working with COTS based software systems for a number of years There is now sufficient documented experience in the community to collect analyze and disseminate success stories common failings lessons learned and research advances The mounting experience shows that the effective use of COTS software products in major software systems demands new skills knowledge and abilities changed roles and responsibilities and different techniques and processes The International Conference on COTS Based Software Systems ICCBSS focuses on the challenges of building and maintaining systems that incorporate COTS software products The conference sponsors the National Research Council Canada the Software Engineering Institute and the University of Southern California Center for Software Engineering aim to bring together managers developers maintainers and researchers to share their expertise and experience
