

This flow chart is just 1 way to get to a genus. An organism can vary from its expected biochemical reaction. The definitive ID book is Bergey's Manual. Use as many tests as possible to support your identification.

Family of Enterobacteriaceae

These genera are VERY closely related and you will have to use a variety of tests to differentiate among the species—gelatin, lysine decarboxylase, VP, motility, urea, malonate, DNase—to name a few.

These are key tests for identification, but NOT the only differences among the organisms. These test reactions represent the predominant reaction. Be mindful that an organism may not run true to its reaction, or that a species within a genus may be different. **BE SURE THAT YOU ARE ACCURATELY PERFORMING AND INTERPRETING THE TEST.** You will have to identify what additional tests to run to differentiate among species within a genus.
