### Description

EST's Signature Series Model SIGA-PS Intelligent Photoelectric Smoke Detector gathers analog information from its smoke-sensing element and converts it into digital signals. The detector's on-board microprocessor measures and analyzes these signals. It compares the information to historical readings and done-patterns to make an alarm decision. Digital filters remove signal patterns that are not typical of fires. Unwanted alarms are virtually eliminated.

The microprocessor in each detector provides four additional benefits - **Self-Diagnosis and History Log, Automatic Device Mapping, Stand-alone Operation and Part, Stable Communication.**

**Self-Diagnosis and History Log** - Each Signature Series detector constantly runs self-checks to provide important maintenance information. The results of the self-checks are automatically updated and permanently stored in the detector's non-volatile memory. This information is accessible for review any time at the control panel, PC, or by using the SIGA-PRO Signature Program/Service Tool.

<sup>1</sup> ESTDV-2 only.

<sup>2</sup> Available with SIGA-PS2 programming tool.

The information stored in the detector's memory includes:

- detector type, serial number, and address
- date of manufacture, hours of operation, and last maintenance date<sup>2</sup>
- current detector sensitivity and environmental compensation values
- original detector sensitivity values upon manufacturing<sup>2</sup>
- number of recorded alarms and troubles<sup>2</sup>
- time and date of last alarm<sup>2</sup>
- analog signal patterns just before the last alarm<sup>2</sup>
- most recent trouble code logged by the detector — 32 possible trouble codes may be used to diagnose faults.

In the unlikely event that an unwanted alarm does take place, the control panel's history file can be called up to help isolate the problem and prevent it from happening again.

**Automatic Device Mapping** - The loop controller learns where each device's serial number address is installed relative to other devices on the circuit. The mapping feature provides supervision of each device's installed location to prevent a detector from being reinstalled (after cleaning etc.) in a different location from where it was originally. The history log for the detector remains relevant and intact regardless of its new location.

The Signature Series Data Entry Program also uses the mapping feature. With interactive menus and graphic support, the wired circuits between each device can be examined. Layout or "as-built" drawing information showing wire branches (T-taps), device types and their address are stored on disk for printing hard copy. This takes the mystery out of the installation. The preparation of "as-built" drawings is fast and efficient.

Device mapping allows the Signature-loop controller to discover:

- unexpected additional device addresses
- missing device addresses
- changes to the wiring in the circuit.
