*Seismic Design of Industrial Facilities* Sven Klinkel, Christoph Butenweg, Gao Lin, Britta Holtschoppen, 2013-09-04

Seismic Design of Industrial Facilities demands a deep knowledge on the seismic behaviour of the individual structural and non structural components of the facility possible interactions and last but not least the individual hazard potential of primary and secondary damages

From 26-27 September 2013 the International Conference on Seismic Design of Industrial Facilities firstly addresses this broad field of work and research in one specialized conference. It brings together academics, researchers and professional engineers in order to discuss the challenges of seismic design for new and existing industrial facilities and to compile innovative current research. This volume contains 50 contributions to the SeDIF Conference covering the following topics with respect to the specific conditions of plant design: International building codes and guidelines on the seismic design of industrial facilities; Seismic design of non structural components; Seismic design of silos and liquid filled tanks; Soil structure interaction effects; Seismic safety evaluation; uncertainties and reliability analysis; Innovative seismic protection systems; Retrofitting.

The SeDIF Conference is hosted by the Chair of Structural Statics and Dynamics of RWTH Aachen University, Germany, in cooperation with the Institute for Earthquake Engineering of the Dalian University of Technology, China

**Seismic Design and Assessment of Bridges** Andreas J. Kappos, M. Saiid Saiidi, M. Nuray Aydinoglu, Tatjana Isaković, 2012-04-17

The book focuses on the use of inelastic analysis methods for the seismic assessment and design of bridges for which the work carried out so far, albeit interesting and useful, is nevertheless clearly less than that for buildings. Although some valuable literature on the subject is currently available, the most advanced inelastic analysis methods that emerged during the last decade are currently found only in the specialised research oriented

literature such as technical journals and conference proceedings Hence the key objective of this book is two fold first to present all important methods belonging to the aforementioned category in a uniform and sufficient for their understanding and implementation length and to provide also a critical perspective on them by including selected case studies wherein more than one methods are applied to a specific bridge and by offering some critical comments on the limitations of the individual methods and on their relative efficiency The book should be a valuable tool for both researchers and practicing engineers dealing with seismic design and assessment of bridges by both making the methods and the analytical tools available for their implementation and by assisting them to select the method that best suits the individual bridge projects that each engineer and or researcher faces
