## **Ethical Conflicts In Psychology:**

*Ethical Conflicts in Psychology* Donald N. Bersoff, 2008 Describes the fundamental ethical dilemmas embedded in the psychologist's array of roles: assessor, treator, and researcher. This title offers readers information on such complex issues as the duty to protect multiple relationships, privacy, privileged communication, and the treatment of minors and clients with HIV/AIDS.

*Ethical Conflicts in Psychology* Donald N. Bersoff, 1999-01 This book was written to help researchers, practitioners, and teachers in psychology become more discerning about their own behavior and the ethical constraints under which they work. This new edition reviews the basic ethical issues involved in the many roles psychologists play and updates readers on such complex issues as multiple relationships, privacy, privilege, and the duty to warn and deception in research. Each of the 10 chapters includes classic and recent articles and books that illuminate the most salient points related to ethics. Over 30 new articles and commentary have been added on topics such as testifying as an expert witness, providing services on the Internet, and practicing ethically within the parameters of managed care. In addition to the sanctioned ethics codes and guidelines of the American Psychological Association, this new edition considers the ethics code of the Canadian Psychological Association. The volume prepares psychologists and psychologists in training to grapple with the often conflicting demands of being ethical in complex situations. PsycINFO Database Record © 2004 APA. **Ethical Conflicts in Psychology** Eric York-Dogin, 2019 *Ethical conflicts in psychology 1st ed*, 1995 **Ethical Issues in Psychology** Philip Banyard, Cara Flanagan, 2025-05-06 *Ethical Issues in Psychology* A Critical Introduction offers readers a clear review of current ethical practices and ideas in psychology and goes on to challenge some of the agreed wisdom on ethics. Ethical issues within psychology are not easy to resolve and debates continue as we encounter new dilemmas. This book introduces ethics and their importance and uses examples from psychological research to consider key ethical issues, ethical principles, and guidelines for psychologists, including BPS guidelines, ethics in practice in psychology, ethical problems within psychology, such as racism, and methods for ethical research, including socially sensitive research, internet-mediated research, and the use of animals in psychological research. Fully up to date, this book considers recent challenges for researchers and teachers, including privacy and consent dilemmas in the use of social media for psychological research, the rise of the open science movement, and an awareness of research misconduct and fraud, and the narrow focus of psychological research that positions itself as objective and scientific while sitting in a European and therefore predominantly White context. Offering a comprehensive examination of ethical issues in psychology across a wide range of fields, the book encourages readers to consider the ethics-related questions they should be asking when undertaking their own research. The book is essential reading for undergraduate and pre-undergraduate students of psychology and related subjects.

*Ethical Issues in Psychology* Philip Banyard, Cara Flanagan, 2013-03-01 How do we know right from wrong, good from bad, help from hindrance, and how can we judge the behaviour of others? Ethics are the rules and guidelines that we use to make such judgements.

Often there are no clear answers which make this subject both interesting and potentially frustrating In this book the authors offer readers the opportunity to develop and express their own opinions in relation to ethics in psychology There are many psychological studies that appear to have been harmful or cruel to the people or animals that took part in them For example memory researchers carried out studies on a man who had no memory for over forty years but because he had no memory he was never able to agree to the studies Is this a reasonable thing to do to someone Comparative psychologist Harry Harlow found that he could create severe and lasting distress in monkeys by keeping them in social isolation Is this a reasonable thing to do even if we find out useful things about human distress If you were able to use psychological techniques to break someone down so that they revealed information that was useful to your government would you do it If so why If not why not These ethical issues are not easy to resolve and the debates continue as we encounter new dilemmas This book uses examples from psychological research to look at key ethical issues ethical guidelines of psychologists socially sensitive research ethics in applied psychology the use of animals in research This book is essential reading for undergraduate and pre undergraduate students of psychology and related subjects such as philosophy and social policy
