Ethics In Tissue Establishments:

Ethics In Tissue Establishments Jorge Morales Pedraza, 2014-09-05 At present the international community cannot be assured that the quality and in particular the safety of tissues for transplants is properly guaranteed in all countries and regions Shortcomings of international and regional ethical rules and standards in the field of tissue banking the lack of national ethical rules and standards in force in several countries the lack of proper regulatory oversight and overall lack of harmonisation of existing ethical rules and standards contribute to the problem This book addresses the issues by promoting the adoption of an ethical policy and the use of a model code of ethics and a model code of practice as a reference for the tissue banking community government agencies and policy makers worldwide This will facilitate the use of tissue processed in one country in any other country that needs it with the additional assurance of quality and safety that is lacking presently

Legal Basis Of Global Tissue Banking: A Proactive Clinical Perspective Glyn O Phillips, 2015-07-16 The banking of human tissues for clinical transplantation has grown exponentially in the past 10 15 years Tissue banks have been set up throughout the world initially on an ad hoc basis More recently these have grown and in many countries have linked up with larger international companies While standards for the procurement processing and storage of the tissues have kept pace with the growth of the subject this is not so with the legal considerations associated with the practice There is no unified legal system which is internationally operated Europe USA Asia Latin America China have been developing legal systems on an individual basis This book describes the present state of the development of laws to control and make the banking and use of tissues legal and safe It describes for the first time the current systems which are used throughout the world and points the way to setting up a harmonized global legal system

The Ethical and Legal Regulation of Human Tissue and Biobank

Research in Europe Katharina Beier, Nils Hoppe, Silvia Schnorrer, Christian Lenk, 2011 Human tissue and biobank research is of increasing importance for understanding the causes of widespread diseases and developing effective therapies However while the success of biobank research depends on the availability of a large number of samples and the consolidation of collections across country borders is very desirable from the perspective of researchers the legal and ethical requirements for the procurement storage and use of human tissue samples are rather heterogeneous across different countries Moreover the lack of comprehensive supranational regulation on human tissue and biobanking can be seen as posing a serious threat to transnational biomedical research Against this background it was one of the aims of the EU funded Tiss EU project Evaluation of Legislation and Related Guidelines on the Procurement Storage and Transfer of Human Tissues and Cells in the European Union an Evidence Based Impact Analysis to analyse the ethical and legal regulation of human tissue and biobank research across the 27 European Member States plus Switzerland The results of nine international workshops and three conferences are gathered in this volume While the country reports evaluate the implementation of ethical and legal guidelines at a national level point out their strengths and deficits and where required create an evidence base for the

revision of said legislation the conference reports address more general ethical and legal issues in this field The volume is completed by a final presentation of project s results Publisher s description **Xenotransplantation : ethical, legal, economic, social, cultural and scientific background.** 4 Carlos M.
