1. The line drawn from the centre of a circle perpendicular to a chord bisects the chord.

Maths Statement: Line through centre and chord

2. The perpendicular bisector of a chord passes through the centre of the circle.

Maths Statement: perp. bisector of chord

Means:

3. The angle subtended by an arc at the centre of a circle is double the size of the angle subtended by the same arc at the circle.

Maths Statement:

$$\angle \text{at centre} = 2 \times \angle \text{at } Q \text{ or } R$$

4. Angles subtended by a chord of the circle on the same side of the chord are equal.

Maths Statement:

$\angle$ s in same segment

5. The opposite angles of a cyclic quadrilateral are supplementary.

Maths Statement: opp. $\angle$ s of cyclic quad.

6. Two tangents drawn to a circle from the same point outside the circle are equal in length.

Maths Statement: tangents from point outside $\angle$

7. The angle between the tangent to a circle and the chord drawn from the point of contact is equal to the angle in the alternate segment.

Maths Statement:

$\angle$ between tangent and chord

8. A tangent to a circle is perpendicular to the radius, drawn to the point of contact.

Maths Statement:

$\perp$ radius

Euclidean Geometry Properties Of Circles:

Principles of Geometry: Plane geometry: conics, circles, non-Euclidean geometry Henry Frederick Baker, 1922

Methods for Euclidean Geometry Owen Byer, Felix Lazebnik, Deirdre L. Smeltzer, 2010-12-31 Euclidean plane geometry is one of the oldest and most beautiful topics in mathematics. Instead of carefully building geometries from axiom sets, this book uses a wealth of methods to solve problems in Euclidean geometry. Many of these methods arose where existing techniques proved inadequate. In several cases, the new ideas used in solving specific problems later developed into independent areas of mathematics. This book is primarily a geometry textbook, but studying geometry in this way will also develop students' appreciation of the subject and of mathematics as a whole. For instance, despite the fact that the analytic method has been part of mathematics for four centuries, it is rarely a tool a student considers using when faced with a geometry problem. *Methods for Euclidean Geometry* explores the application of a broad range of mathematical topics to the solution of Euclidean problems.

Circles: A Mathematical View Dan Pedoe, 2020-08-03 This revised edition of a mathematical classic originally published in 1957 will bring to a new generation of students the enjoyment of investigating that simplest of mathematical figures, the circle. The author has supplemented this new edition with a special chapter designed to introduce readers to the vocabulary of circle concepts with which the readers of two generations ago were familiar. Readers of *Circles* need only be armed with paper, pencil, compass, and straight edge to find great pleasure in following the constructions and theorems. Those who think that geometry using Euclidean tools died out with the ancient Greeks will be pleasantly surprised to learn many interesting results which were only discovered in modern times. Novices and experts alike will find much to enlighten them in chapters dealing with the representation of a circle by a point in three space, a model for non-Euclidean geometry, and the isoperimetric property of the circle.

Fundamental Concepts of Geometry Bruce E. Meserve, 2014-12-08 Demonstrates relationships between different types of geometry. Provides excellent overview of the foundations and historical evolution of geometrical concepts. Exercises, no solutions. Includes 98 illustrations.

Geometry and Symmetry L. Christine Kinsey, Teresa E. Moore, Efstratios Prassidis, 2010-04-19 This new book for mathematics and mathematics education majors helps students gain an appreciation of geometry and its importance in the history and development of mathematics The material is presented in three parts The first is devoted to a rigorous introduction of Euclidean geometry the second covers various noneuclidean geometries and the last part delves into symmetry and polyhedra Historical contexts accompany each topic Exercises and activities are interwoven with the text to enable the students to explore geometry Some of the activities take advantage of geometric software so students in particular future teachers gain a better understanding of its capabilities Others explore the construction of simple models or use manipulatives allowing students to experience the hands on creative side of mathematics While this text contains a rigorous mathematical presentation key design features and activities allow it to be used successfully in mathematics for teachers courses as well

The Poincaré Half-plane Saul Stahl, 1993 The Poincare Half Plane provides an elementary and constructive development of this geometry that brings the undergraduate major closer to current geometric research At the

same time repeated use is made of high school geometry algebra trigonometry and calculus thus reinforcing the students understanding of these disciplines as well as enhancing their perception of mathematics as a unified endeavor **The**

Circle and Conic Section in Non-Euclidean Space Rose Margaret Bennett,1913 **Circles** Daniel Pedoe,1995

Illuminates the fundamental aspects of geometry where the circle plays an important role *Shadows Of The Circle: Conic Sections, Optimal Figures And Non-euclidean Geometry* Vagn Lundsgaard Hansen,1998-04-04 The aim of this book is to throw light on various facets of geometry through development of four geometrical themes The first theme is about the ellipse the shape of the shadow cast by a circle The next a natural continuation of the first is a study of all three types of conic sections the ellipse the parabola and the hyperbola The third theme is about certain properties of geometrical figures related to the problem of finding the largest area that can be enclosed by a curve of given length This problem is called the isoperimetric problem In itself this topic contains motivation for major parts of the curriculum in mathematics at college level and sets the stage for more advanced mathematical subjects such as functions of several variables and the calculus of variations The emergence of non Euclidean geometries in the beginning of the nineteenth century represents one of the dramatic episodes in the history of mathematics In the last theme the non Euclidean geometry in the Poincar disc model of the hyperbolic plane is developed
